ದಿನಾಂಕ:07/11/2020 ರಂದು ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳ ಕಾರ್ಯಾಲಯದಲ್ಲಿ ನಡೆದ "ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯ" ಜಿಲ್ಲಾ ಮಟ್ಟದ ಸಮಿತಿ (DLC) ಸಭೆಯ ನಡವಳಿಕೆಗಳು.

ದಿನಾಂಕ: 07/11/2020 ರಂದು ಮುಂಜಾನೆ 11.00 ಗಂಟೆಗೆ ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು, ಹಾಸನರವರ ಕಾರ್ಯಾಲಯದಲ್ಲಿ ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು, ಹಾಸನರವರ ಅಧ್ಯಕ್ಷತೆಯಲ್ಲಿ "ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯ" ಜಿಲ್ಲಾ ಮಟ್ಟದ ಸಮಿತಿ (DLC) ಸಭೆಯನ್ನು ಏರ್ಪಡಿಸಲಾಯಿತು.

ಸಭೆಯಲ್ಲಿ ಹಾಜರಿದ್ದ ಅಧಿಕಾರಿಗಳು:

- 1 ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು, ಹಾಸನ.
- 2 ಮುಖ್ಯ ಕಾರ್ಯನಿರ್ವಾಹಕ ಅಧಿಕಾರಿಗಳು, ಹಾಸನ.
- 3 ಎಂಟು ನಿರ್ದೇಶಕರು, ಕೃಷಿ ಇಲಾಖೆ, ಹಾಸನ.
- 4 ಉಪನಿರ್ದೇಶಕರು, ತೋಟಗಾರಿಕೆ ಇಲಾಖೆ, ಹಾಸನ.
- 5 ಕಾರ್ಯಪಾಲಕ ಅಭಿಯಂತರರು, ಸಣ್ಣ ನೀರಾವರಿ ಇಲಾಖೆ ಹಾಸನ.
- 6 ಶ್ರೀ ಕಾಗದಾಜು ಮೀನುಗಾರಿಕೆ, ಗೋಡುರು.
- 7 ಶ್ರೀ ಎಸ್. ಪ್ರಾಂತ್ ವ್ಯವಸ್ಥಾಪಕರು, ಹಾಸನ.
- 8 ಡಾ|| ಶಿವರಂಜನ್ ಓರಿಯ ಮಿಷನ್‌ಗಳು ಕಂದರೆ, ಕೃಷಿ ಮಿಷನ್ ಕೇಂದ್ರ ಹಾಸನ.
- 9 ಮೀನುಗಾರಿಕೆ ಓರಿಯ ಸಹಾಯಕ ನಿರ್ದೇಶಕರು, ಹಾಸನ.

ಜಿಲ್ಲಾಮಟ್ಟದ ಸಮಿತಿಯ ಸದಸ್ಯ ಕಾರ್ಯದರ್ಶಿ ಮತ್ತು ಮೀನುಗಾರಿಕೆ ಓರಿಯ ಸಹಾಯಕ ನಿರ್ದೇಶಕರು ಸಭೆಯಲ್ಲಿ ಹಾಜರಿದ್ದ ಅಧ್ಯಕ್ಷರನ್ನು, ವಿವಿಧ ಜಿಲ್ಲಾ ಮಟ್ಟದ ಅಧಿಕಾರಿಗಳನ್ನು ವಿವಿಧ ಸಂಸ್ಥೆಯ ಮುಖ್ಯಸ್ಥರನ್ನು ಮತ್ತು ಸಾಮಾನ್ಯಜನಿಕ ಸದಸ್ಯರನ್ನು ಸಭೆಗೆ ಕ್ಷಣಿಸುತ್ತಾ, ಸಭೆಯ ಅಧ್ಯಕ್ಷತೆ ವಹಿಸಿ ಸಭೆಯನ್ನು ನಡೆಸಿಕೊಂಡು ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳಲ್ಲಿ ಕೊನೆಯಿತು.

ಸಭೆಯ ಕಾರ್ಯಸೂಚಿ ಪ್ರಕಾರ ಸಭೆಯನ್ನು ಪ್ರಾರಂಭಿಸಲು ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು ಸದಸ್ಯ ಕಾರ್ಯದರ್ಶಿಯವರಿಗೆ ಕೂರಿಸಿ ನೀಡಿದರು. ಸದಸ್ಯ ಕಾರ್ಯದರ್ಶಿ ಮತ್ತು ಮೀನುಗಾರಿಕೆ ಓರಿಯ ಸಹಾಯಕ ನಿರ್ದೇಶಕರು ಹಾಸನರವರು ಸಭೆಯಲ್ಲಿ ಮೀನುಗಾರಿಕೆ ಇಲಾಖೆಯ ಕುರಿತು ಮಾಹಿತಿಯನ್ನು ಒದಗಿಸುತ್ತಾ ಹಾಸನ ಜಿಲ್ಲೆಯ ಜಲಸಂಪನ್ಮೂಲಗಳ ಬಗ್ಗೆ ವಿವರಿಸಿದರು. ಜಿಲ್ಲೆಯಲ್ಲಿ ಮೀನು ಉತ್ಪಾದನೆ ಹೆಚ್ಚಿಸುವ ಕುರಿತು "ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯಡಿ" ಕಮಿ ಕೈಗೊಳ್ಳಬಹುದಾಗಿರುವ ಒಂದು ಮಾಹಿತಿ ನೀಡಿದರು. ಈ ಯೋಜನೆ ಕುರಿತು ಸಾರ್ವಜನಿಕರಿಗೆ/ಮೀನುಗಾರರಿಗೆ/ಮೀನುಗಾರಿಕೆಗೆ ಹೆಚ್ಚಿನ ಮಾಹಿತಿ ನೀಡಿ ಹೆಚ್ಚು ಹೆಚ್ಚು ಮೀನುಗಾರಿಕೆ/ಮೀನುಗಾರರು ಸವರಿ ಯೋಜನೆಯಲ್ಲಿ ತೊಡಗಿಸಿಕೊಳ್ಳುವಂತೆ ತೋರಿಸಲು ಸೂಕ್ತ ಕಮಿಷನರು ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು ಕೂರಿಸಿದರು. ಇದಕ್ಕೆ ಮೀನುಗಾರಿಕೆ ಓರಿಯ ಸಹಾಯಕರು ಹಾಸನರವರು, ಈಗಾಗಲೇ ವಿವಿಧ ಏಜೆನ್ಸಿಗಳಲ್ಲಿ ಮತ್ತು ಆಕಾರವಾಣಿಯ ಮೂಲಕ ಯೋಜನೆಗಳ ಬಗ್ಗೆ ಪ್ರಕಟಿಸಿದ್ದು, ಅರ್ಜಿಗಳನ್ನು ಆಹ್ವಾನ ಮಾಡಲಾಗಿದೆ, ಮುಂದುವರಿದು, ತಾಲ್ಲೂಕು ಮಟ್ಟದ ಅಧಿಕಾರಿಗಳು ವಿವಿಧ ಸಭೆಗಳಲ್ಲಿ ಸವರಿ ಯೋಜನೆಗಳ ಬಗ್ಗೆ ಹೆಚ್ಚಿನ ಪ್ರಚಾರ ನೀಡುವ ಕಮಿ ಕೈಗೊಂಡಿರುತ್ತಾರೆಯೇ ಸಭೆಗೆ ತಿಳಿಸಿದರು. ಅದರಲ್ಲಿ ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು, ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯ ಬಗ್ಗೆ ಸಾರ್ವಜನಿಕರಿಗೆ ಹೆಚ್ಚಿನ ಪ್ರಚಾರ ನೀಡುವಂತೆ ಕೂರಿಸಿದರು.

ಸಭೆಯ ಅಧ್ಯಕ್ಷರು ಹಾಗೂ ಸಮಿತಿಯ ಜಿಲ್ಲಾ ಸದಸ್ಯರಿಗೂ ಮೀನುಗಾರಿಕೆ ಓರಿಯ ಸಹಾಯಕ ನಿರ್ದೇಶಕರು, ಹಾಸನರವರು ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯ ಮೂಲ ಉದ್ದೇಶ, ಸವರಿ ಯೋಜನೆಯ ರೂಪರೇಷೆ, ಯೋಜನೆಯ ವಿವಿಧ ಫಲಾನುಭವಿಗಳ ಆಧಾರಿತ ಕಾರ್ಯಕ್ರಮಗಳು ಹಾಗೂ ಜಿಲ್ಲಾ ಮಟ್ಟದ ಸಮಿತಿಯ ಕರ್ತವ್ಯಗಳು ಮತ್ತು ಜವಾಬ್ದಾರಿಗಳ ಕುರಿತು ಸಭೆಯಲ್ಲಿ ಮಾಹಿತಿ ನೀಡಿದರು. ಜಿಲ್ಲೆಯಲ್ಲಿ ಪ್ರಧಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಪದ ಯೋಜನೆಯ ಕೆಲವು ಯೋಜನೆ ರೂಪಿಸುವುದು, ಕೆಲವು ಯೋಜನೆ

ಅನುಮೋದನೆ, ಫಲಾನುಭವಿಗಳ ಅನುಮೋದನೆ ಮತ್ತು ಕಾರ್ಯಕ್ರಮದ ಅನುಷ್ಠಾನದ ಮೇಲಿರುವ ಸದರಿ ಸಮಿತಿಯ ಸ್ಪಷ್ಟನೆ ಇರುವುದು ಎಂದು ಸಭೆಗೆ ತಿಳಿಸಿದರು.

ಸಭೆಯ ಮುಂದಿನ ಕಾರ್ಯಕ್ರಮವೇ ಪ್ರಕಾರ 2020-21 ನೇ ಸಾಲಿನ ಹೊಸದಾಗಿ ಪ್ರದಾನ ಮಂತ್ರಿ ಮತ್ತು ಸಂಸದ ಯೋಜನೆಯಡಿ ಅರ್ಹತೆಗಾಗಿ ಅರ್ಜಿಗಳನ್ನು ಸಭೆಯ ಮುಂದೆ ಅನುಮೋದನೆಗಾಗಿ ಮಂಡಿಸಲಾಯಿತು.

ಅನುಮೋದನೆಗಾಗಿ ಮಂಡಿಸಲಾದ ಯೋಜನಾವಾರು ಫಲಾನುಭವಿಗಳ ವಿವರ ಈ ಕೆಳಗಿನಂತಿರುತ್ತದೆ.

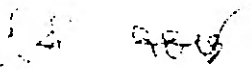

- 1) ಹೊಸದಾಗಿ ಒಳಗಡೆಗೆ ಕೊಳಗು ನಿರ್ಮಾಣಕ್ಕಾಗಿ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-16 ಫಲಾನುಭವಿಗಳು.
- 2) ಹೊಸದಾಗಿ ಒಳಗಡೆಗೆ ಮಲಗಾ ಕೊಳಗು ನಿರ್ಮಾಣಕ್ಕಾಗಿ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-01 ಫಲಾನುಭವಿಗಳು.
- 3) RASರಿಯಲ್ಲಿ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-04 ಫಲಾನುಭವಿಗಳು.
- 4) ಸಿಬಿಎಂಆರ್ ಸರ್ವೆಗಳಿಗೆ ಒಯ್ಯೋಪ್ಪೇಟ್ ಕೊಳಗು ನಿರ್ಮಾಣಕ್ಕಾಗಿ ಸ್ವೀಕರಿಸಲಾದ ಅರ್ಜಿ-02 ಫಲಾನುಭವಿಗಳು.
- 5) ಒಳಗಡೆಗಾರಿಕೆಗಾಗಿ ಒಳಗಡೆಗೆ ಮಲಗಾ ಮತ್ತು ಐಸಿಎಲ್ ಮಲಗಾಕ್ಕೆ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-05 ಫಲಾನುಭವಿಗಳು.
- 6) ಒಳಗಡೆಗಾರಿಕೆಗಾಗಿ ಒಳಗಡೆಗೆ ಮಲಗಾಕ್ಕೆ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-02 ಫಲಾನುಭವಿಗಳು.
- 7) ಒಳಗಡೆಗಾರಿಕೆಗಾಗಿ ಬೈಸಿಲ್ ಮತ್ತು ಐಸಿಎಲ್ ಮಲಗಾಕ್ಕೆ ಸ್ವೀಕರಿಸಲಾದ ಒಬ್ಬ ಅರ್ಜಿಗಳು-01 ಫಲಾನುಭವಿಗಳು.
- 8) ಸರ್ವೆಯಿರುವ ಒಳಗಡೆಗೆ ಮಲಗಾಕ್ಕೆ -01.

ಮುಂದುವರಿದು, ಮಾನ್ಯ ಜಿಲ್ಲಾಧಿಕಾರಿಗಳು ಹಾಗೂ ಮುಖ್ಯ ಕಾರ್ಯನಿರ್ವಾಹಕ ಅಧಿಕಾರಿಗಳು, ಜಿಲ್ಲಾ ಪಂಚಾಯತ್, ಹಾಸನರವರು ಸದಕ್ಕೆ ಕಾರ್ಯನಿರ್ವಹಿಸುವಂತೆ ಕಾಲಕಾಲಕ್ಕೆ ಸಭೆಯನ್ನು ಕರೆದು ಈ ಯೋಜನೆಯನ್ನು ಯಶಸ್ವಿಗೊಳಿಸಲು ಸೂಚಿಸಿದರು. ಕೊನೆಯಲ್ಲಿ ಪಂದನಾರ್ಪಣೆಯೊಂದಿಗೆ ಸಭೆಯನ್ನು ಮುಕ್ತಾಯಗೊಳಿಸಲಾಯಿತು.

2. BACKGROUND /INTRODUCTION (REGION SPECIFIC)

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system rears fish at high densities, in indoor tanks with a "controlled" environment. Recirculation aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters, and the method can in principle be used for any species grown in aquaculture such as fish, shrimps, clams, etc. Recirculation technology is however primarily used in fish farming.

Recirculation is growing rapidly in many areas of the fish farming sector, and systems are deployed in production units that vary from huge plants generating many tonnes of fish per year for consumption.

Recirculation can be carried out at different intensities depending on how much water is recirculate or re-used. Some farms are super intensive farming systems installed inside a closed insulated building using as little as 300 litres of new water, and sometimes even less, per kilo of fish produced per year. Other systems are traditional outdoor farms that have been rebuilt into recirculate systems using around 3 m³ new water per kilo of fish produced per year. Seen from an environmental point of view, the limited amount of water used in recirculation is of course beneficial as water has become a limited resource in many regions. Also, the limited use of water makes it much easier and cheaper to remove the nutrients excreted from the fish as the volume of discharged water is much lower than that discharged from a traditional fish farm. Recirculation aquaculture can therefore be considered a most environmentally friendly way of producing fish at a commercially viable level. The nutrients from the farmed fish can be used as fertilizer on agricultural farming land or as a basis for biogas production.

Most interesting though, is the fact that the limited use of water gives a huge benefit to the production inside the fish farm. Traditional fish farming is totally dependent on external conditions such as the water temperature in the tanks, cleanliness of the water, oxygen levels, or weed and leaves drifting downstream and blocking the inlet screens, etc. In a recirculate system these external factors are eliminated either completely or partly, depending on the degree of recirculation and the construction of the plant. Recirculation enables the fish farmers to completely control all the parameters in the production, and

the skills of the farmer to operate the recirculation system itself becomes just as important as his ability to take care of the fish.

Controlling parameters such as water temperature, oxygen levels, or daylight for that matter, give stable and optimal conditions for the fish, which again gives less stress and better growth. These stable conditions result in a steady and foreseeable growth pattern that enables the farmer to precisely predict when the fish will have reached a certain stage or size. The major advantage of this feature is that a precise production plan can be drawn up and that the exact time the fish will be ready for sale can be predicted. This favours the overall management of the farm and strengthens the ability to market the fish in a competitive way

BACKGROUND

Tumakuru is one of the industrial cities located in the state of Karnataka, also known as *Shaikshanika Nagari* (city of education) and *Kalpatharu Nadu* (land of coconut trees). Since 28 August 2010, Tumakuru has been accorded the status of a City Corporation. It is situated at a distance of 70 km (43 mi) northwest of Bangalore, along National Highway NH-4 and NH-206. It is the headquarters of the Tumakuru district. The District has 401 Departmental tanks (>40 Ha. act) with WSA of 31373.39 Ha. 1319 G P tanks (<40 Ha. act), with WSA of 3129 Ha. besides 4 reservoirs contributing to WSA of 3798 Ha. Fishermen population of the District is estimated to be around 21800 There are 25 Fisheries Co-operative societies of which 23 are active in fisheries. 8 nurseries in different Taluks of the District have the capacity to supply 25 lakhs per annum. The stocking potential of the District is 250 lakhs seeds per annum. Targeted fish production is 17000-18000 MT fish per annum. A revenue of Rs.1.30 Crore is revenue remitted to Government from disposal of fishery rights of 224 Departmental tanks during 2016-17.

3. BENEFITS & JUSTIFICATION

- Reduced dependency on antibiotics and therapeutants generate marketing advantage of high quality 'safe' seafood.
- Reduction of direct operational costs associated with feed, predator control and parasites.
- Potentially eliminate release of parasites to recipient waters.
- Risk reduction due to climatic factors, disease and parasite impacts provided the RAS design has fully taken into account local climate, ambient air / water temperature conditions, incoming water treatment and bio-security.
- RAS production can promote versatility in terms of location for farming, proximity to market and construction on brown-field sites. However, they still need to be in close proximity to source water supplies and consideration needs to be given to local water quality and aesthetics since RAS farms resemble industrial buildings.
- Enable production of a broad range of species irrespective of temperature requirements provided costs of temperature control beyond ambient are energy efficient.
- Enable secure production of non-endemic species.
- Feed management is potentially greatly enhanced in RAS when feeding can be closely monitored over 24h periods. The stable environment promotes consistent growth rates throughout the production cycle to market size - provided the operator and RAS design has taken into account the diverse range of water quality management issues. Optimum environmental conditions promote excellent FCRs with some high value species achieving market size.
- The benefits of RAS in terms of feed management assumes the operator has the capability to accurately control and record fish biomass, mortality rates and movements across the farm. Efficiency in these tasks becomes increasingly important with increasing farm size.
- Due to increased growth rates and superior FCRs that can be secured in RAS farms energy savings related to feed use may partially compensate for increased energy costs associated with pumping and water purification.

- Exposure of stock to stress on RAS farms can be reduced for some factors such as adverse weather, unfavourable temperature conditions, pollution incidents and predation. However, fish welfare can be reduced and exposure to stressful situations increased in relation to stocking density, chronic exposure to poor water quality and associated metabolic by-products due to inadequate water treatment technology or inexperienced management.

4. OBJECTIVES

- Reduced water requirements as compared to pond aquaculture systems.
Decreased by 90%
- Reduced land needs due to the high stocking density
- Site selection flexibility and independence from a large, clean water source.
- Reduction in waste water effluent volume. Environmental friendly.
- Increased biosecurity and ease in treating disease outbreaks if any.
- Ability to closely monitor and control environmental conditions to maximize production efficiency. Similarly, independence from weather and variable environmental conditions. Can be used in extreme weather zone also with ease.
- High output fish from minimal area with fish density ranging upto 50-150kg/m³ under perfect conditions

B. Technical Specifications

The fish tanks are dug up (38X16X6 ft.) of which volume is 90 cum and water capacity of tank is 90000 litre. The dimensions of the fish tank (an elevation and plan for same is attached with this document). Additional input will be sought from a Civil Engineer to assess the Structural stability of the tanks. Furthermore, Geo-membrane lined ponds have an average life span of 10-15 years if proper maintenance is adhered to.

The fish tank will be covered with 90% shade net or any other material to avoid direct sunlight falling on the tanks which could cause algal bloom which if uncontrolled will have an adverse effect on fish health.

This would be a standalone RAS system and can be modified and clubbed to other systems such as Aquaponics or IFS (Integrated Farming System) if so desired at a later date with little effort as per your requirements.

There should be continuous power supply to the system as any prolonged power failure would have an adverse effect. Total power consumption would be limited to under 3KV max.

Other instruments like Bio Filters, Swirl Filters, Aeration Devices, EPDM Diffusers etc. have a longer life if they are maintained regularly unless there is wear and tear from mishandling. The Filter module is constructed keeping in mind the ease of maintenance and handling. A pressure washer will come in handy for ease of cleaning the filters and tanks etc.

The pumps (pond pump and aeration devices) are imported and have high life efficiency and can be run 24 x 7 x 365 days at a fraction of power consumption than commercially available pumps. It is a very rare chance that anything gets burnt out. There would be no warranty on such items.

For smooth functioning of filters and for best water quality parameters at high stocking density we need are to clean and maintain the filters periodically. Ideally, 10% per cent periodic water exchange may be required to keep the system a running at its optimal condition.

The filter set we are going to install is MBBR (Moving Bed Bio Reactor) which is a proven technology used by industry experts for STP, Aquaculture, WTP etc. The main advantage of MBBR filter is listed out below:

5. TECHNICAL DETAILS

A. Site/ Location Details

SURVEY NO. 69,
BOREHALLI,
MUDUDI(POST),
GANDASI(HOBLI),
ARASIKERE (TALUK),
HASSAN (DISTRICT)
KARNATAKA - 573119

- Less sensitivity to Shock Loading.
- Clog-free Operation.
- No Channels or Dead spots.
- Provides High Bio – Surface Area.
- Make Bio-Reactors extremely compact.
- No Backwash needed.
- No Sludge return Systems Needed.
- Longer Media Life

Scope of the Project: Tilapia (GIFT/MST) – Detailed

Tilapias (GIFT – Genetically Improved Farmed Tilapia or MST – Mono Sex Tilapia) are the fish of choice as we have chosen to recirculate water. The fingerlings will be at a max size of 2-3 inches and will grow up to 500-750 gm. in period of 6-8 months.

As the fishes are all MALEs there wouldn't be a problem of reproduction there by increasing growth rate.

Technically for every 100 fishes put into the pond there may be a mortality rate of 10-15% and the growth rate varies according to water quality and DO – dissolved oxygen levels, but out of the 100 fingerlings, 30% will grow faster (shooters) and can be harvest as early as 4 months, 15% will be slow growers and the rest will put out an average growth as mentioned above.

The maximal stocking density for pond would be 6000 fingerlings with a total count of 6000 fingerlings in a pond with a culture period of 6 months (2 cycles annually).

The production capacity for each pond for a culture period of 6-7 months is minimum 500 gm to 1 Kg per fish with combined value of 2000 Kg.

The optimal fingerling size would be of 2-2.5 inches of GIFT (Genetically Improved Farmed Tilapia) or MST (Monosex Tilapia)

Fish feed can be locally sourced in bulk from local distributors and of floating type pellets, Growel, Unibait, Anmol and Godrej are the brands available. Growel is a preferable choice. Details of the distributor will be provided to you.

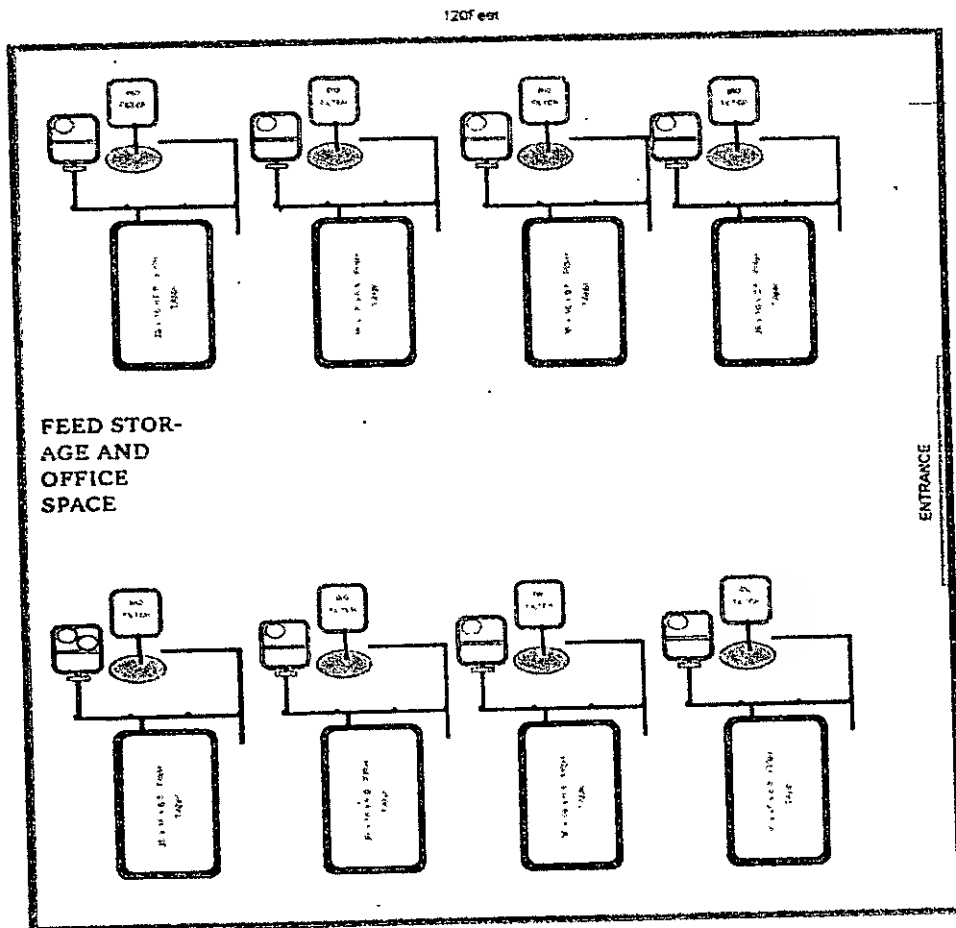

2-
Additionally, we can reduce the feed cost by feeding Azolla or Duckweed as one time per day supplement to the fishes. Azolla and Duckweed are high in protein content and will complement a complete and balanced diet to the fishes. A plan for such will be provided to you along with Azolla/Duckweed seeds.

We need to have a complete water analysis kit and will be trained on usage of such as regular water quality testing is an important factor in Aquaculture to get the desired output. The kit includes colorimetric test reagents for Ammonia, Nitrite, Nitrate and pH levels along with digital pH and Temp meters.

The required fingerling of GIFT & the required quantity of fish feed will be given by Aqua One Centre at optimal cost.

Quote/Project Description:

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system rears fish at high densities. Recirculatory aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters

Sl No	Item Cost	Unit Price	No.	Total Costing
1	MBBR Filtration Set (Acrobic, Anaerobic & Fine Filtration Module)	₹ 92,500.00	8	₹ 8,00,000.00

7. COST ESTIMATES

A. Capital Cost

A. CAPITAL COST	Unit Price	Qty	Total
Fish Tank Construction (90 Cub.meter)	100000	8	₹ 8,00,000.00
MBBR Filtration Set (De-coupled &Anerobic)	92500	8	₹ 7,40,000.00
Feed Storage & Office Unit	100000	1	₹ 1,00,000.00
Pond Pump 15000LPH	10500	8	₹ 84,000.00
Air oxytube	410	240	₹ 98,400.00
Aerators (Air pump for oxygen Supply) 120 LPM	10000	16	₹ 1,60,000.00
Aerators (Air pump for oxygen Supply) 60 LPM	8500	8	₹ 68,000.00
Pressure washer, water testing kit & Misc. Items	35000	1	₹ 35,000.00
Electricity Connection and Power Backup	350000	1	₹ 3,50,000.00
Biosecurity fencing for pond (Including 90% Shade)	200000	1	₹ 2,00,000.00
Transportation Cost	60000	1	₹ 60,000.00
Plumbing items	75000	1	₹ 75,000.00
Installation and Misc Expenses	300000	1	₹ 3,00,000.00
TOTAL A			₹ 30,70,400.00

B. OPERATIONAL COST			
Gift Tilapia Seeds (Anually 2 cycles)	2.5	96000	₹ 2,40,000.00
Feed Cost (Anually 2 cycles)	42	45000	₹ 18,90,000.00
Transportation Cost	20000	2	₹ 40,000.00
Electricity Cost Annually	12	18000	₹ 2,16,000.00
Total B			₹ 23,86,000.00

C. COST-BENEFIT ANALYSIS	
C1. Annual fixed cost	
a. Depreciation on capital investment, @ 15%	₹ 4,60,560.00
b. Insurance premium @ 2% of the capital investment	₹ 61,408.00
c. Interest on 75% of the capital investment @ 7.8% per annum	₹ 1,79,618.40
d. Administrative/Other expenses @ 2% of 75% capital investment	₹ 46,056.00
TOTAL Annual fixed cost C1 (a+b+c+d)	₹ 7,47,642.40
C2. Annual Variable Cost	
a. Annual operational cost (B)	₹ 23,86,000.00
b. Interest on operational cost @ 7.8%	₹ 1,86,108.00
TOTAL Annual variable cost C2 (a+b)	₹ 25,72,108.00
TOTAL OPERATIONAL COST (C1+C2)	₹ 33,19,750.40

D. INCOME	
a. Income from GIFT Tilapia production (500gm) - 40000 kg @ Rs. 150/-	₹ 60,00,000.00
b. Income from other fish products @ 40% of 20k Fishes @ Rs. 40/- per Kg	₹ 3,20,000.00
TOTAL INCOME	₹ 63,20,000.00

FINANCIAL ANALYSIS	
a. Operating cost	₹ 23,86,000.00
b. Total cost	₹ 54,56,400.00
c. Gross Revenue	₹ 63,20,000.00
d. Net Operating income (C-a)	₹ 39,34,000.00
e. Net profit (c-b)	₹ 8,63,600.00
f. BC ratio (c/b)	1.16

9. EXPECTED OUTCOMES

1. Expected Production of Fishes =40,000kg per year

Expected Income = 63,20,000 per year
(avg 150rs / kg per year)

2. Expected Profit

- i) 1st YEAR 8,63,600 /-
- ii) 2nd YEAR 39,34,000/-
- iii) THIS WILL CONTINUE FROM NEXT YEAR

Hence, From 8 Fish Ponds we can get this much of production and Profit after reduction of Operation Cost also.

PROJECT REPORT FOR THE PROPOSED CONSTRUCTION OF GROWOUT FISH POND

Name of the Applicant : Arun kumar C R S/O Rangaswamy

Project Address : Teranya village

Survey Nos. : 13/2

Hobli : halekote

Taluk : Holenarasipura

District : Hassan

PROJECT REPORT FOR THE CONSTRUCTION OF FISH CULTURE GROWOUT POND

INTRODUCTION: Fish is the cheapest and most easily digestible animal protein and was obtain from natural sources from time immemorial for consumption by human being. However, due to over exploitation and pollution, the availability of fish in natural water have declined considerable forcing scientists to adopt various methods to increase production in controlled or under artificial conditions. The technology development for fish culture in which more than one type of compatible fishes are cultured simultaneously has now picked up in the country called as composite fish culture. This will enables to get maximum fish production for a pond through utilization of available fish food organisms in all the niches, supplemented by artificial feeding.

BACKGROUND: The new proposed Growout fish pond construction by **Sri. Arun kumar C R S/O Rangaswamy Teranya village halekote hobali holenarasipura taluk- 573211** in survey nos. 13/2 has a water source from canal/river and also he is having a water source from borewell. The proposed land is having black soil with high water retention capacity very much suitable for fish culture. The farmer with his family members are very much interested in taking up fish farming in ½(half) acre area as they are not getting good price/profit in the agriculture crop cultivation. With good education, experienced family members and fish farming experienced relatives in AP, he wants to do a fish farming in a scientific way by targeting 1-2.5 tons/1/2acre of fish production. Since he is having a surplus water source, can do farming continuously throughout the year. As the proposed site is just one km away from state high way road, the accessibility to the site is very easy and can monitor whenever any emergency situation arises. The road accessibility made

him to transport the harvested fishes in lesser time with fresh condition to the consumer.

DETAILS OF THE PROJECT AND ECONOMICS AT GLANCE:

1	Location and ownership of the land	Sri. Arun kumar C R S/O Rangaswamy Teranya village halekote hobali holenarasipura taluk-573211
2	Water spread area	0.2Ha (1/2-half acer)
3	Water level of the pond	1.5 mtr
4	Nature of soil	Black soil
5	Pond conditions	Good
6	Water supply	Borewell and canel/ HemavathiRiver
7	Inputs	Feed – starting with GOC and Rice bran, shifting to artificial pelleted feed with expected FCR of 1.4 -2.0
a)	Stocking of pond	At 10000/Ha of size 3-4 inch fingerlings. The price of the seed will be Rs.3 per seed.
b)	Fertilization:	Depending upon water & soil quality to be assessed on periodical study.
	a)Organic manure	10,000 kg cattle dung & 2,000 kg Poultry manure/Ha/Year.
	b)In organic manure	Super phosphate 500 kg/Ha/year & Urea 100 kg/Ha/year.
8	Mode of Harvest	Repeated netting once they reach marketable size of 1.0 kg & above (partial harvesting method over a period of three months.)
9	Growth & Fish production	Expected fish production 4.0 tons / acr by following scientific methods of fish culture envisaged in the project report.
10	Marketing	Bhalki Town, neighboring villages & cities like Bidar, Kalburgi, Raichur, Manvi, Sirivara, Ballari, Gadag, Harihara, Davanagere, Hospet, Hubli, Bangalore, Bhadravathi, Tumkur etc. Excess production will be exported to Howrah market in Kolkata, Salem, Coimbatore & Trichur markets in south India as well as to the Karnataka state govt owned Karnataka Co-operative Fisheries Development Federation who are bulk purchasing fresh fish from fish farmers & selling

through their retail outlets (KIOSKS) in Mysore, Bangalore, Tumkur, Mandya & Hassan districts.

Detailed Estimate of Capital and Operational Costs

Constructing pond area: 0.2 Ha

Sl No.	Items	Unit	Rate (Rs.)	Amount (in Rs.)
A. Capital Cost				
01	Land cleaning/ pond excavation	0.2Ha	-	5,00,000/-
02	Civil works for water supply (inlet & outlet), cement pipes, sluice gates etc.	2	25,000/-	1,00,000/-
03	Shed for feed storage & watchman shed	1	10,0000/-	10,0000/-
04	Farm equipments)nets, aeration appliances)	4	10,000/-	10,000/-
05	Any other	1	10,000/-	10,000/-
Total Capital Cost (A)				6,30,000/-
B. Operational Cost				
01	Lime (Kgs.)	200	10/-	1,000/-
02	Cow dung (Kgs.)	2000	5/-	10,000/-
03	Urea (Kgs.)	20	10/-	200/-
04	Super Phosphate (Kgs.)	100	5/-	500/-
05	Fish seed/Fish Fingerlings	2000	3/-	6,000/-
06	Feed (Pelleted Feed/Supplementary feeding with DOB and GOC) in Kgs.	3000	30/-	90,000/-
07	Medicines	-	-	25,000/-
08	Labour expenses	01	10000/month	1,20,000/-
09	Miscellaneous expenses	-	-	50,000/-
Total Operational Cost (B)				3,02,700-00

	A. Total Project Cost (A+B)	9,32,700/-
	B. Income	
01	Production)From 2 nd year onwards) @ 10.0 tons/Ha	2000 Kgs
02	Sale price/ton @ 130000/- per ton	2,60,000/-
03	Total Profit (Rs.)	1,00,000-00/-

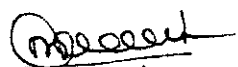

Note: This estimate is based on the state latest schedule of rates (SOR). Detailed estimate of civil works attached separately. The items included are only illustrative and other items may be included at the appropriate time and place.

Estimates of Output and Value of Output:

Species	Duration of cycle (Months)	Density of Fingerlings	Survival Rate (%)	Average Wt.(Kgs.)	Production (Kgs.)	Price/kg	Output Value (Rs)
Rohu	10	800	90	1.1	800	130/-	1,04,000/-
Catla	10	600	90	1.4	600	130/-	78,000/-
Mrigal	10	400	90	1.0	400	130/-	52,000/-
Other	10	200	90	2.0	200	130/-	26,000/-
Total		2000	90	1.0	2000	100%	2,60,000/-

Source of Finance:

Item	Amount (Rs.)
Central Government	33,600/-
State Government	22,400/-
Bank Loan	-
Beneficiary's own funds	8,55,200/-
Total Cost of the Project	9,11,200/-

Arup-Holenarasipura

The project cost 0.20 ha grow -out pond is Rs.9.00 lakhs and eligible subsidy is Rs.1.05 lakhs [40 % subsidy]. As per the norms we are required to meet remaining cost as beneficiary share amounting to Rs.1.05 lakhs.

In this regard I am furnishing this letter of undertaking stating that :

1. Newly construction of new grow - out ponds will be used for fisheries activities at least for a minimum period of next five years.
2. We have not availed similar assistance during last 5 years and not availed subsidy for the same activity under any other scheme or from any agency.
3. Construction of new grow - out ponds would be managed under the supervision/ guidance of qualified technical experts/ technical officers of the state department of fisheries.
4. All the post construction operation and maintenance costs of the construction new grow - out ponds shall be borne by us
5. Construction of new grow - out ponds constructed under the program will be subjected to inspection and audit by the state department of fisheries, NFDB or its representatives.

Estimate for Bio floc fish Farming 4 Diameter PVC liner for 7tank.

Sl.no	Description	Qty
1.	Cement work for 4 dia mtr solid brick for base structure & central drain with concrete and plastering	2 layers
2.	Drain piping with L and value system (outlet)	3 inches(pipe)
3.	MS framing for 4 dia mtr radius with all necessary supports and fixing	
4.	Geo fabric liner in between MS frame and PVC liner	1Layer
5.	Tarpaulin (550 GSM) installation and jointing (5 Years warranty)	7 Nos
6.	Air blowers 2 HP	2no
7.	Spiders	28no
8.	Water inlet pipe.system (2inch) each tank	1
9.	Electrical wiring for air blowers & installation	

Total cost: 5, 40,000/- + GST applicable

Price Include:

- 1.Site visit and planning.
- 2.Construction & installation of above said necessary items.
3. Visit charges will be at extra cost for each visit.
4. Work completion within 15 days.

Non-Included:

1. Power back up – UPS, Solar panels, Diesel generators.
2. Storeroom for feed storage.

Payment method:

80% Advance.

20% at the time of installation. GST Extra.

Yours truly

because the growth rate and microbial production per unit substrate of heterotrophy are ten-times greater than that of the autotrophic nitrifying bacteria. This technology is based on the principle of flocculation within the system.

COMPOSITION AND NUTRITIONAL VALUE OF BIO-FLOC

Bio-floc is a heterogeneous aggregate of suspended particles and variety of microorganisms associated with extracellular polymeric substances. It is composed of microorganisms such as bacteria, algae, fungi, invertebrates and detritus, etc. It is a protein-rich live feed formed as a result of conversion of unused feed and excreta into a natural food in a culture system on exposure to sunlight. Each floc is held together in a loose matrix of mucus that is secreted by bacteria and bound by filamentous microorganisms or electrostatic attraction. Large flocs can be seen with the naked eye, but most of them are microscopic. Floc size range from 50 — 200 microns.

A good nutritional value is found in bio-floc. The dry weight protein ranges from 25 — 50 percent, fat ranges 0.5 — 15 percent. It is a good source of vitamins and minerals, particularly phosphorous. It also has an effect similar to probiotics. The dried bio-floc is proposed as an ingredient to replace the fishmeal or soybean in the feed.

3. BENEFITS OF BIO-FLOC CULTURE SYSTEM

- Eco-friendly culture system.
- It reduces environmental impact.
- Improves land and water use efficiency
- Limited or zero water exchange
- Higher productivity (It enhances survival rate, growth performance, feed conversion in the culture systems of fish).
- Higher biosecurity.
- Reduces water pollution and the risk of introduction and spread of pathogens

- Cost-effective feed production.
- It reduces utilization of protein rich feed and cost of standard feed.
- It reduces the pressure on capture fisheries i.e., use of cheaper food fish and trash fish for fish feed formulation.

4. OBJECTIVES:

- To promote high yielding intensive fish farming in small area using BFT
- To encourage farmers and unemployed youth into income earning through small scale through BFT

5. TECHNICAL DETAILS

a. Site Details:

The proposed sites of _____ area is located at _____ and is free from all encumbrances. The site is suitable for Bio-floc farming and carrying out culture practice. The water sources _____ and is free from pollutants. The site is not flood prone and is easily accessible by road and has regular power supply. The harvested fish will be marketed to local market/retail market/hotel/restaurants live for better price.

b. Technical Specifications- 75 m³ (7 Tanks)

S.No	Component	Details
1	Area for 7 tanks	150 m ²
2	Bio-floc Tank size	4 meter diameter and 1.5 meter height
3	Water holding capacity of each tank	15,000 Liters capacity
4	Water quality parameters	Dissolved oxygen-5mg/l, Temperature-26-34 degrees, PH-7.5 to 8, TDS-600ppm, Floc density-25-40 mg/l, Ammonia-0.5 ppm, Nitrite-0.3 ppm, Nitrate-150 ppm, Alkalinity-120-280 ppm

5	Tanks Made-up of	Tarpaulin/Fibre
6	Stocking density	100 nos/m ³ (1000 nos per 15,000 litres tank –depending on species)
7	Name of fish species suitable	Tilapia , Common carp and Pangasius
8	Bio floc content	Raw salt, Dolomite, Molasis, probiotics
9	Survival (%)	80
10	Type of feed to be used	floating feed (28-32% Protein content)
11	% of feed	2-3% per Average Body weight
12	Feeding frequency	4 times early stage, later 2 times per day
13	FCR	1:1.2
14	Duration of culture	6 months
15	Size/weight of the species (gm)	600 gm average weight
16	No of crops per year	2
17	Production	3.6 Tonnes per crop (720kg per tank per crop)
18	Farm gate price(Rs)	150/- kg fish
19	Capital cost	6.00 Lakhs
20	Input cost	1.5 lakhs per one crop
21	Total project cost	7.5 lakh

Major cultivable fish species in BFT

A basic factor in designing a bio-floc system is the species to be cultured. Bio-floc systems work best with species that are able to derive some nutritional benefit from the direct consumption of floc. Bio-floc systems are also most suitable for species that can tolerate high solids concentration in water and are generally tolerant of poor water quality. Some of the species that are suitable for BFT are:

- Air breathing fishes like singhi, magur, padma, anabas, pangasius
- Non air-breathing fishes like common carp, rohu, tilapia, milkfish
- Shellfishes like vannamei and tiger shrimp

6. PROJECT FORMULATION

a. Organization and management:

- Project will be implemented by the beneficiary under the technical support of Central/state training institutes
- Financial assistance in the form of subsidy will be obtained from Govt. (Central and State) and the remaining amount will be borne by self through Self-finance/bank loan.

b. Mode of beneficiary selection:

Beneficiary selection is done through recommendation of Department of Fisheries respective states

c. Risk assessment (Bio-security & Environmental Concern)

The project will create no hazards to both human and environment at any cost.

7. STEPS TO SET UP

- Identification of suitable site and setting up of tanks
- Development of inoculums (Pond soil- 20gm/L, Ammonium Sulphate -10mg/L, Carbon Source-200mg/L). Development may take 10-30 days to attain 20-25mg/l imhoff reading
- Procure fish fingerlings and Stocking
- Feeding and management
- Periodical addition of carbon supplements (maintained at C:N ratio of 15:1)
- Periodical removal of bottom sludge and refill

8. Cost Estimates:

- a. Capital Cost: Rs. 6.00 lakh
- b. Operational Cost: Rs. 1.5 lakh

Cost Estimates of Bio-floc Unit:

S.No	Component	Nos	Cost (Rs)	Total (Rs in lakhs)
1	Setup of Tarpaulin/Fiber tanks (15,000 Litters capacity)	7	30,000	2.10
2	Shed material and accessories fixing charges	150 m ²	85,000	0.85
3	Water supply bore well (3HP)	1	80,000	0.80
4	PVC pipe fittings for air, water flow	LS	70,000	0.70
5	Nets and accessories	5	3000	0.15
6	One Blower (1 HP), Air stones and other accessories	1	30000	0.3
7	Electrification	LS	10000	0.1
8	Power generator(2 KVA)	1	40000	0.40
9	Weighing balance	1	5000	0.1
10	Miscellaneous expenses			0.5
			Total	6.00
Input cost for one crop				
11	Seed cost (including transport cost)	4/- each fingerling	7500 @ 1500 per tank	0.3
12	Feed (including transport cost)	3500 kg	35/	1.00
13	Probiotics, molasis and raw salt etc	LS	2000/per tank	0.1
14	Test kits (water quality and bio-floc quantity)	LS	5000	0.05
15	Power charges (20 units per 180 days@4/- per unit)	LS	5000	0.05
	Total cost one crop			1.5
Grand Total				7.50

ECONOMIC FEASIBILITY (ONE CROP)

S.No	Components	Amount (Rs in lakhs)
1	Capital Cost	6.00
2	Operational Cost	1.5
3	Total project Cost	7.5
4	Gross income per crop	5.4
5	Gross profit per crop	2.9 lakhs (after deducting operational cost)
6	Repayment (1/14 of TPC)	0.6
7	Interest(6%) per crop	0.5
8	Depreciation (5% of capital cost)	0.03

To whomsoever it may concern

The project cost for 7 tank (per tank 15000 liter capacity) is Rs. 7.50 lakhs and the subsidy is Rs. 4,50,000 lakhs (Schedule caste 60% subsidy). As per the norms we are required to meet remaining cost as beneficiary share amounting to Rs. 3,00,000 lakhs.

- 1 Biofloc will be used for Fisheries activities at least for a minimum period of next five years.
- 2 We have not availed similar assistance during last 5 years and not availed subsidy for same activity under any other scheme or from any agency.
- 3 Biofloc would be managed under the supervision guidance of qualified technical experts/technical officers of the State department of fisheries.
- 4 All the post construction operation and maintenance costs of the Biofloc shall be borne by the beneficiary.
- 5 Biofloc under the program will be subjected to inspection and audit by the State Department of Fisheries, NIDB or its representatives.

Application form

Name of the component: Development Of Inland Fisheries And Aquaculture

Name of the Sub-component: Construction Of New Grow Out Pond

PART A - Information to be furnished by the applicant

Sl. No (1)	Particulars (2)	Details (3)
◆	APPLICANT'S INFO	
	Name of the applicant (In Block Letters)	K.B KUMAR
	Address	
1	a. Permanent address:	S/O Lt K.N BASAPPA, HYARAGALALE, K. HOSKOTE
	b. Communication/ correspondence address: (Telephone/ mobile number)	HOBALI, ALUR HASSAN -573213
	c. Category	9731745310 GENERAL
◆	LOCATION ASPECTS	
	Details of location/ land where construction is proposed for aquaculture activity	HYARAGALALE, K. HOSKOTE HOBALI
	a) State	KARNATAKA
	b) District	HASSAN
	c) Taluk/ Mandal	ALUR
	d) Revenue Village	HYARAGALALE
2	k) Survey Number(s)	82/2 & 83
	f) Ownership (whether freehold or on lease)	OWN
	g) If on lease, duration of lease (minimum 10 years)	-----
	h) Total area of the proposed unit (in m ³)	1.15acre (50094 sq.ft) and 1.08acre (47044.8 sq.ft) Total =97138.8 sq ft
	i) Approx. number and area /volume presently brought under fish farming (Growout) within the proposed location	No of ponds

◆ **COST ESTIMATES**

Detailed plan and estimate of the proposed construction/establishment works of the fish farm (Grow out)

Estimation cost

◆ **ASSISTANCE AVAILABLE**

4 Whether assistance for this purpose has been obtained under any other scheme of the Central/ State Government/others? ⁴

NO

If yes (provide the details)

Year:

Quantum of assistance:

Conditions for assistance:

◆ **ACTION PLAN**

5 Details of proposed action plan for activities (tentative schedule of activities)

Project preparation - Aug'2019

Process & sanction - Sep and Oct'20

Expected sanction of subsidy - Mar'21

Production structures - Nov'20 to Jan'20

Stocking - Mar'20

Harvesting- Oct'20

◆ **ECONOMICS**

6 Details of economics of operation (proposed production) ⁶

◆ **EXPERIENCE**

GOOD

7 Experience of the applicant in Management of fish farm (Grow out) details of training undergone by the applicant/ employee/ technical staff and others if any?

◆ **FINANCIAL RESOURCES**

8 Financial resources to meet the project costs beyond the eligible subsidy

Promoters have made arrangements to meet the margin requirement from own sources and are agreeable to provide an undertaking for the same

◆ **MARKETING**

9 Marketing tieup for sale of seed/fish with any agency within or outside the area/State

Hassan provides a ready market for the fish to be produced in farm. There is good demand for IMC

10 Letter of undertaking

Necessary undertaking is provided

■ PART-B:- Declaration by the Applicant:

❖ Declaration by the applicant

I/We... /son/spouse/Authorized Signatory/ies of K. B. Kumar hereby declare that the information furnished above is true to the best of my/our knowledge and belief. I am/we are fully aware that if it is found that the information furnished in the application is false or there is any kind of deviation/violation of the conditions under which assistance is provided to me by the DADF, any action as deemed fit for violation of this condition may be taken against me/us.

Date: 02/11/2020

Place: Alwar

K. B. Kumar
Signature of the applicant/s

❖ Confirmation statement by District Fisheries officer/authorized officer

It is hereby confirmed that

- Application together with documents have been verified as per the NFDB guidelines and found to be in order
- The proposed site for establishment of fish farming (Growout) has been inspected by the Departmental Officer/s and found feasible in support of aquaculture as proposed in the DPR
- Proposed establishment of fish farming/seed rearing is needed to accelerate fish and seed production

Date :

Place :

[Signature]
Name, Signature and seal of the District Fisheries Officer/authorized officer

❖ Recommendation by the Commissioner/ Director of Fisheries

- The self contained proposal/DPR along with verified individual's applications and associated documents for establishment of RAS units is submitted herewith to NFDB as per the BR guidelines
- State Government has made adequate budget allocations to meet its share of financial assistance
- Recommended for consideration for Central Financial Assistance under BR scheme

Date :

Place :

Signature and seal of the Head of the department/authorized officer

❖ Recommendation by the authorized officer of NFDB

The individual's application, attached documents and the self contained project proposals/DPRs of States/UTs submitted to NFDB has been verified as per the guidelines of the Board and found correct. State Government has indicated adequate budget allocations to meet its share of financial assistance. The self contained project proposal/DPRs of the State/UT for establishment of RAS units is hence recommended and forwarded to DADF for consideration and final approval.

Date :

Place :

Signature and seal of the authorized officer of NFDB

PMMSY – Karnataka Proposals – 2020-21

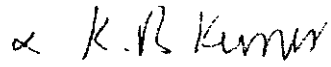

Letter of Undertaking from Applicant regarding NewGrow out pond construction Proposal

To whomsoever it may concern

I/We K.B Kumar s/o Lt. Basappa, here by State that we are submitting an application for availing subsidy under PMMSY guidelines for establishment of New Grow out pond construction units at Sy.no 82/2 & 83, hyaragalale, K. Hoskote hobali, Alur (t) Hassan (d).

In this regard I am furnishing this letter of undertaking stating that:

1. Newly constructed Grow out pond will be used for aquaculture activities at least for a minimum period of next five years.
2. We have not availed similar assistance during last 5 years and not availed subsidy for the same activity under any other scheme or from any agency.
3. Grow out ponds would be managed under the supervision/ guidance of qualified technical experts/ technical officers of the State department of fisheries
4. All the post construction operation and maintenance costs of the Grow out ponds shall be borne by us
5. New Grow out ponds constructed under the program will be subjected to inspection and audit by the State Department of Fisheries, NFDB or its representatives

Signature of the Applicant

Place : Alur

ಪ್ರಮಾಣ ಪತ್ರ

ನಾನು ಶ್ರೀ ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ೦೪ ೦೮ ೧೯೫೭ ರಲ್ಲಿ ಜನಿಸಿದ್ದು ನಾನು ೧೦ ವರ್ಷದವನಾಗಿದ್ದಾಗ

ನಾನು ದೇವರ ಪುತ್ರನಲ್ಲಿ ಪ್ರಮಾಣ ಮಾಡಿ ನನ್ನ ಸವಕಳಿಯೆಂದರೆ:-

~~ನಾನು ಮೇಲ್ಕಂಡ ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ~~

ನನ್ನ ದೇವರಗೆ ಅಲ್ಲದ ತಾಲ್ಲೂಕು ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ೦೪ ೦೮ ೧೯೫೭ ರಲ್ಲಿ ೧೫ ನಂ: ೧೧ ರಲ್ಲಿ ೧೫ ನಂ: ೦೪ ಗುಂಪೆ ಮಗನು ಆದ, ಗ್ರಾಮದ ಸ.ನಂ-೪೨ ರಲ್ಲಿ ೧೫ ನಂ: ೧೫ ಗುಂಪೆ ಜಮೀನು ಇರುತ್ತದೆ ಅಲ್ಲದ ನಾನು ಮೇಲ್ಕಂಡ ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ಅಲ್ಲದವನು ಸಹಾಯಧನ ಸೌಲಭ್ಯ ಪಡೆಯುವ ಸಲುವಾಗಿ ಸಂಬಂಧಪಟ್ಟ ಜಮೀನುಗಳ ಚಕ್ರಬಂದಿ ಈ ಕೆಳಕಂಡಂತೆ ಇರುತ್ತದೆ.

೧. ಅಲ್ಲದ ತಾಲ್ಲೂಕು ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ೦೪ ೦೮ ೧೯೫೭ ರಲ್ಲಿ ೧೫ ನಂ: ೧೧ ರಲ್ಲಿ ೧೫ ನಂ: ೦೪ ಗುಂಪೆ ಮಗನು ಆದ, ಗ್ರಾಮದ ಸ.ನಂ-೪೨ ರಲ್ಲಿ ೧೫ ನಂ: ೧೫ ಗುಂಪೆ ಈ ಮೇಲ್ಕಂಡ ಎರಡು ಜಮೀನುಗಳಿಗೆ ಸಂಬಂಧಪಟ್ಟ ಚಕ್ರಬಂದಿ
 ಮೂವರು ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ತಲೆ ಜಮೀನು
 ಮಕ್ಕಳು ಮಾವಪ್ಪರವರ ತಲೆ ಜಮೀನು
 ಮಕ್ಕಳು ಕೆ.ಬಿ.ಕುಮಾರ ತಂದೆ ತಲೆ ಜಮೀನು
 ಮಕ್ಕಳು ಕುಬ್ಜಪ್ಪರ ಮಠದ ಜಮೀನು.

ಅಲ್ಲದ ಈ ಪ್ರಮಾಣ ಪತ್ರವನ್ನು ಸಂಬಂಧಪಟ್ಟ ಅಧಿಕಾರಿಗಳಿಗೆ ಸಲ್ಲಿಸಲು ಈ ಪ್ರಮಾಣ ಪತ್ರ ನಾಟಕವಿರುತ್ತದೆ.

ಈ ಮೇಲ್ಕಂಡ ಎಲ್ಲಾ ಅಂಶಗಳು ನನಗೆ ತಿಳಿದ ಮಟ್ಟಿಗೆ ಸತ್ಯವಾಗಿರುತ್ತದೆ ಎಂದು ದೇವರ ಪುತ್ರನಲ್ಲಿ ಪ್ರಮಾಣೀಕರಿಸಿ ನನ್ನ ಸವಕಳಿಯ ಮೂಡಿಸುತ್ತೇನೆ.

ಶ್ರೀ: ಅಲ್ಲದ

Application form

Name of the component: Development of inland fisheries And Aquaculture.

Name of the Sub-component: Construction of New grow out ponds.

PART A - Information to be furnished by the applicant		
Sl. No	Particulars	Details
(1)	(2)	(3)
◆	APPLICANT'S INFO	
1	Name of the applicant (In Block Letters)	K.R. Kumaraswamy S/O Rangegowda
	Address d. Permanent address: e. Communication/ correspondence address: (Telephone/ mobile number) f. Category	Kodihalli, Madihalli (H), Belur (T), Hassan Ph No-9449325670
	◆	LOCATION ASPECTS
	Details of location/ land where construction is proposed for aquaculture activity	Kodihalli
2	a) State	Karnataka
	b) District	Hassan
	c) Taluk/ Mandal	Belur
	d) Revenue Village	Kodihalli Village
	i) Survey Number(s)	09*
	f) Ownership (whether freehold or on lease)	Own
g) If on lease, duration of lease (minimum 10 years)	-	
h) Total area of the proposed unit (in m ²)	0.202 ha	
i) Approx. number and area /volume presently brought under fish farming (Growout) within the proposed location	0.202 ha	

◆	COST ESTIMATES	
3	Detailed plan and estimate of the proposed construction/establishment works of the fish farm (Grow out)	4.80 Lakhs
◆	ASSISTANCE AVAILED	
4	Whether assistance for this purpose has been obtained under any other scheme of the Central/ State Government/others? ⁴	NO If yes (provide the details) Year: Quantum of assistance: Conditions for assistance:
◆	ACTION PLAN	
5	Details of proposed action plan for activities (tentative schedule of activities)	Project preparation - Aug'20 Process & sanction - Sep and Oct'20 Expected sanction of subsidy - Mar'20 Production structures - Nov'20 to Jan'20 Stocking - Mar'20 Harvesting- Oct'20
◆	ECONOMICS	
6	Details of economics of operation (proposed production) ⁶	
◆	EXPERIENCE	
7	Experience of the applicant in Management of fish farm (Grow out) details of training undergone by the applicant/ employee/ technical staff and others if any?	No
◆	FINANCIAL RESOURCES	
8	Financial resources to meet the project costs beyond the eligible subsidy	Promoters have made arrangements to meet the margin requirement from own sources and are agreeable to provide an undertaking for the same
◆	MARKETING	
9	Marketing tieup for sale of seed/fish with any agency within or outside the area/State	Hassan provides a ready market for the fish to be produced in farm. There is good demand for IMC
◆	UNDERTAKING	
10	Letter of undertaking	Necessary undertaking is provided

PART B - Declaration by the Applicant	
Declaration by the applicant I/We Kumarwamy/son/spouse/Authorized Signatory/ies of Rangegowda hereby declare that the information furnished above is true to the best of my/our knowledge and belief. I am/we are fully aware that if it is found that the information furnished in the application is false or there is any kind of deviation/violation of the conditions under which assistance is provided to me by the DADF, any action as deemed fit for violation of this condition may be taken against me/us.	
Date:	20/02/2020
Place:	Gulbarga
Signature of the applicant/s	
Confirmation statement by District Fisheries officer/authorized officer It is hereby confirmed that a. Application together with documents have been verified as per the NFDB guidelines and found to be in order b. The proposed site for establishment of fish farming (Growout) has been inspected by the Departmental Officer/s and found feasible in support of aquaculture as proposed in the DPR c. Proposed establishment of fish farming/seed rearing is needed to accelerate fish and seed production	
Date:	
Place:	
Signature and seal of the District Fisheries Officer/authorized officer	
Recommendation by the Commissioner/ Director of Fisheries a. The self contained proposal/DPR along with verified individual's applications and associated documents for establishment of RAS units is submitted herewith to NFDB as per the BR guidelines b. State Government has made adequate budget allocations to meet its share of financial assistance c. Recommended for consideration for Central Financial Assistance under BR scheme	
Date:	
Place:	
Signature and seal of the Head of the department/authorized officer	
Recommendation by the authorized officer of NFDB The individual's application, attached documents and the self contained project proposals/DPRs of States/UTs submitted to NFDB has been verified as per the guidelines of the Board and found correct. State Government has indicated adequate budget allocations to meet its share of financial assistance. The self contained project proposal/DPRs of the State/UT for establishment of RAS units is hence recommended and forwarded to DADF for consideration and final approval.	
Date:	
Place:	
Signature and seal of the authorized officer of NFDB

PMMSY – Karnataka Proposals – 2020-21

Letter of Undertaking from Applicant regarding New Grow out pond construction Proposal

To whomsoever it may concern

I/We KUMARASWAMY S/O RANGEGOWDA here by State that we are submitting an application for availing subsidy under PMMSY guidelines for establishment of New Grow out pond construction units at Sy.no 16, village,KODIHALLI ,MADIHALLI hobli, BELUR Taluk &HASSAN dt.

In this regard I am furnishing this letter of undertaking stating that:

1. Newly constructed Grow out pond will be used for aquaculture activities at least for a minimum period of next five years

~~2. We have not availed similar assistance during last 5 years and not availed subsidy for the same activity under any other scheme or from any agency~~

3. Grow out ponds would be managed under the supervision/ guidance of qualified technical experts/ technical officers of the State department of fisheries

~~4. All the post construction operation and maintenance costs of the Grow out ponds shall be borne by us~~

5. New Grow out ponds constructed under the program will be subjected to inspection and audit by the State Department of Fisheries, NFDB or its representatives

PMMSY – Karnataka Proposals – 2020-21

Applicants Declaration regarding Self Finance

To whomsoever it may concern

I/We KUMARSWAMY S/O RANGEGOWDA here by State that we are submitting an application for availing subsidy under PMMSY guidelines for establishment of New Grow out pond construction units at Sy.no 09,3 Acre 23 Guntas village, KODIHALLI ,MADIHALLI hobli, BELUR Taluk &HASSAN dt.

The project cost for 0.2ha 1.42 lakhs Unit cost and eligible subsidy is Rs. 0.57 lakhs (40% subsidy). As per the norms we are required to meet remaining cost as beneficiary share amounting to Rs. 0.85 lakhs.

I/we here by confirm that the margin amount will be met from our own sources and arrangement have been made towards, the same from own sources and in support of which we are furnishing the details on bank account in the name of project promoter as follows

Name of the Bank (i) Kaveri Gramena Bank

Branch Name Adagur, Belur

IFSC CODE PKGB0012079

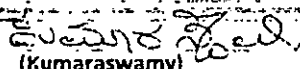

Account Number (i) 12079100002258

Type of Account (i) S-B

Balance in the Account (i) 9286/-

In addition to above we have other sources to mobilize our share for which we are enclosing documentary evidence as follows (Delete if not applicable)

As per the PMMSY schemes guideline and orders Govt. Assistance will be restricted to 0.2ha new growout ponds for individual beneficiary. Whereas I submitted proposal for 0.2ha new grow out ponds if possible kindly sanction the subsidies for 0.2ha new grow out ponds acceptable from my side (Decision left to higher Concerned Authorities).

(Kumaraswamy)

Sl. No (1)	Particulars (2)	Details (3)
◆	APPLICANT'S INFO	
	Name of the applicant (In Block Letters)	MANJUNATHA SWAMY K S
	Address	
1	a. Permanent address:	S/O SOME Gowda, KALHALLI, KATTAYA
	b. Communication/ correspondence address: (Telephone/ mobile number)	HOBALI, SHETTIHALLI HASSAN -573218
	c. Category	9008719992 GENERAL
◆	LOCATION ASPECTS	
	Details of location/ land where construction is proposed for aquaculture activity	
	a) State	KARNATAKA
	b) District	HASSAN
	c) Taluk/ Mandal	HASSAN
	d) Revenue Village	KATTAYA
2	k) Survey Number(s)	221
	f) Ownership (whether freehold or on lease)	OWN
	g) If on lease, duration of lease (minimum 10 years)	
	h) Total area of the proposed unit (in m ³)	0.6 ac,s (6000sqfeet)
	i) Approx. number and area /volume presently brought under fish farming (Growout) within the proposed location	No of ponds

♦ **COST ESTIMATES**

- 3 Detailed plan and estimate of the proposed construction/establishment works of the fish farm (Grow out)

Estimation cost

♦ **ASSISTANCE AVAILABLE**

- 4 Whether assistance for this purpose has been obtained under any other scheme of the Central/ State Government/others? ⁴

NO
If yes (provide the details)
Year:
Quantum of assistance:
Conditions for assistance:

♦ **ACTION PLAN**

- 5 Details of proposed action plan for activities (tentative schedule of activities)

Project preparation - Aug'2019
Process & sanction - Sep and Oct'20
Expected sanction of subsidy - Mar'21
Production structures - Nov'20 to Jan'20
Stocking - Mar'20
Harvesting- Oct'20

♦ **ECONOMICS**

- 6 Details of economics of operation (proposed production)

♦ **EXPERIENCE**

- 7 Experience of the applicant in Management of fish farm (Grow out) details of training undergone by the applicant/ employee/ technical staff and others if any?

GOOD

♦ **FINANCIAL RESOURCES**

- 8 Financial resources to meet the project costs beyond the eligible subsidy

Promoters have made arrangements to meet the margin requirement from own sources and are agreeable to provide an undertaking for the same

♦ **MARKETING**

- 9 Marketing tieup for sale of seed/fish with any agency within or outside the area/State

Hassan provides a ready market for the fish to be produced in farm. There is good demand for IMC

♦ **UNDERTAKING**

- 10 Letter of undertaking

Necessary undertaking is provided

■ PART-B:- Declaration by the Applicant

❖ Declaration by the applicant

I/We... /son/spouse/Authorized Signatory/ies ofhereby declare that the information furnished above is true to the best of my/our knowledge and belief. I am/we are fully aware that if it is found that the information furnished in the application is false or there is any kind of deviation/violation of the conditions under which assistance is provided to me by the DADF, any action as deemed fit for violation of this condition may be taken against me/us.

Date: 18-12-2020

Place: Hassan

Signature of the applicant/s

❖ Confirmation statement by District Fisheries officer/authorized officer

It is hereby confirmed that

- Application together with documents have been verified as per the NFDB guidelines and found to be in order
- The proposed site for establishment of fish farming (Growout) has been inspected by the Departmental Officer/s and found feasible in support of aquaculture as proposed in the DPR
- Proposed establishment of fish farming/seed rearing is needed to accelerate fish and seed production

ಜಿಲ್ಲಾ ಪಂಚಾಯಿತಿ, ಹಾಸನ

Name, Signature and seal of the District Fisheries Officer/authorized officer

Date :

Place :

❖ Recommendation by the Commissioner/ Director of Fisheries

- The self contained proposal/DPR along with verified individual's applications and associated documents for establishment of RAS units is submitted herewith to NFDB as per the BR guidelines
- State Government has made adequate budget allocations to meet its share of financial assistance
- Recommended for consideration for Central Financial Assistance under BR scheme

Date :

Place :

Signature and seal of the Head of the department/authorized officer

❖ Recommendation by the authorized officer of NFDB

The individual's application, attached documents and the self contained project proposals/DPRs of States/UTs submitted to NFDB has been verified as per the guidelines of the Board and found correct. State Government has indicated adequate budget allocations to meet its share of financial assistance. The self contained project proposal/DPRs of the State/UT for establishment of RAS units is hence recommended and forwarded to DADF for consideration and final approval.

PMMSY – Karnataka Proposals – 2020-21

Letter of Undertaking from Applicant regarding NewGrow out pond construction Proposal

To whomsoever it may concern

I/We **MANJUNATHA SWAMY S/O SOME GOWDA** here by State that we are submitting an application for availing subsidy under PMMSY guidelines for establishment of **New Grow out pond construction** units at Sy.no 221, kalhalli ,kattayya hobali shetty halli Hassan (t) (d).

In this regard I am furnishing this letter of undertaking stating that:

1. Newly constructed **Grow out pond** will be used for aquaculture activities at least for a minimum period of next five years
2. We have not availed similar assistance during last 5 years and not availed subsidy for the same activity under any other scheme or from any agency
3. **Grow out ponds** would be managed under the supervision/ guidance of qualified technical experts/ technical officers of the State department of fisheries
4. All the post construction operation and maintenance costs of the **Grow out ponds** shall be borne by us
5. **New Grow out ponds** constructed under the program will be subjected to inspection and audit by the State Department of Fisheries, NFDB or its representatives

PMMSY – Karnataka Proposals – 2020-21

Applicants' Declaration regarding Self Finance

To whomsoever it may concern

I/We Manjunatha swmay k s s/o some gowda here by State that we are submitting an application for availing subsidy under PMMSY guidelines for establishment of Re-circulatory Aquaculture System (RAS) units at Sy.no221- 3 ac, kalhalli village, kattayahobli, Hassan Taluk & dt.

The project cost Rs. 7.00 lakhs and eligible subsidy is Rs. 4.20 lakhs (60% subsidy). As per the norms we are required to meet remaining cost as beneficiary share amounting to Rs. 4.20 lakhs.

I/we here by confirm that the margin amount will be met from our own sources and arrangement have been made towards, the same from own sources and in support of which we are furnishing the details on bank account in the name of project promoter as follows

- Name of the Bank (i) corporation bank
- Branch Name hassan
- IFSC CODE CORP0002129
- Account Number (i) 212900101000709
- Type of Account (i) S.B
- Bal. in the Account (i)

in addition to above we have other sources to mobilize our share for which we are enclosing documentary evidence as follows (Delete if not applicable)

As per the PMMSY schemes guideline and orders Govt. Assistance will be restricted to one unit of large RAS for individual beneficiary. Whereas I submitted proposal for 02 large RAS Units if possible kindly sanction the subsidies for 02 units. Or else if you restrict subsidy for (Rs.30.00 lakh, 60% subsidy) 01 RAS large unit also acceptable from my side (Decision left to higher Concerned Authorities).

PROJECT REPORT FOR THE PROPOSED CONSTRUCTION OF GROWOUT FISH POND

Name of the Applicant : Menasamma G. Ninganna w/o late Chikidegowda

Project Address : Masrshettihalli village

Survey Nos. : 1

Hobli : Halekote

Taluk : Holenarasipura

District : Hassan

PROJECT REPORT FOR THE CONSTRUCTION OF FISH CULTURE GROWOUT POND

INTRODUCTION: Fish is the cheapest and most easily digestible animal protein and was obtain from natural sources from time immemorial for consumption by human being. However, due to over exploitation and pollution, the availability of fish in natural water have declined considerable forcing scientists to adopt various methods to increase production in controlled or under artificial conditions. The technology development for fish culture in which more than one type of compatible fishes are cultured simultaneously has now picked up in the country called as composite fish culture. This will enables to get maximum fish production for a pond through utilization of available fish food organisms in all the niches, supplemented by artificial feeding.

BACKGROUND: The new proposed fish pond construction by Sri. Menasamma u ningamma w/o late chikkegowda marashettihalli village halekote hobali holenarasipura taluk-573211 in survey nos. 1 has a water source from canal/river and also he is having a water source from borewell. The proposed land is having black soil with high water retention capacity very much suitable for fish culture. The farmer with his family members are very much interested in taking up fish farming in ½(half) acre area as they are not getting good price/profit in the agriculture crop cultivation. With good education, experienced family members and fish farming experienced relatives in AP, he wants to do a fish farming in a scientific way by targeting 1-2.5 tons/1/2acre of fish production. Since he is having a surplus water source, can do farming continuously throughout the year. As the proposed site is just one km away from state high way road, the accessibility to the site is very easy and can monitor whenever any emergency situation arises. The road accessibility made

him to transport the harvested fishes in lesser time with fresh condition to the consumer.

DETAILS OF THE PROJECT AND ECONOMICS AT-GLANCE:

1	Location and ownership of the land	Sri. Menasamma u ningamma w/o late chikkegowda marashettihalli village halekote hobali holenarasipura taluk-573211
2	Water spread area	0.2Ha (1/2-half acer)
3	Water level of the pond	1.5 mtr
4	Nature of soil	Black soil
5	Pond conditions	Good
6	Water supply	Borewell and canal Hemavathi River
7	Inputs	Feed - starting with GOC and Rice bran, shifting to artificial pelleted feed with expected FCR of 1.4-2.0
a)	Stocking of pond	At 10000/Ha of size 3-4 inch fingerlings. The price of the seed will be Rs.3 per seed.
	Fertilization:	Depending upon water & soil quality to be assessed on periodical study.
b)	a) Organic manure	10,000 kg cattle dung & 2,000 kg Poultry manure/Ha/Year.
	b) Inorganic manure	Super phosphate 500 kg/Ha/year & Urea 100 kg/Ha/year.
8	Mode of Harvest	Repeated netting once they reach marketable size of 1.0 kg & above (partial harvesting method over a period of three months.)
9	Growth & Fish production	Expected fish production 4.0 tons / acr by following scientific methods of fish culture envisaged in the project report.
10	Marketing	Bhalki Town, neighboring villages & cities like Bidar, Kalburgi, Raichur, Manvi, Sirivara, Ballari, Gadag, Hanhara, Davanagere, Hospet, Hubli, Bangalore, Bhadravathi, Tumkur etc. Excess production will be exported to Howrah market in Kolkata, Salem, Coimbatore & Trichur markets in south India as well as to the Karnataka state govt owned Karnataka Co-operative Fisheries Development Federation who are bulk purchasing fresh fish from fish farmers & selling

through their retail outlets (KIOSKS) in Mysore, Bangalore, Tumkur, Mandya & Hassan districts.

Detailed Estimate of Capital and Operational Costs

Constructing pond area: 0.2 Ha

Sl No.	Items	Unit	Rate (Rs.)	Amount (in Rs.)
A. Capital Cost				
01	Land cleaning/ pond excavation	0.2Ha	-	5,00,000/-
02	Civil works for water supply (inlet & outlet), cement pipes, sluice gates etc.	2	25,000/-	1,00,000/-
03	Shed for feed storage & watchman shed	1	10,0000/-	10,0000/-
04	Farm equipments (nets, aeration appliances)	4	10,000/-	10,000/-
05	Any-other	1	10,000/-	10,000/-
Total Capital Cost (A)				6,30,000/-
B. Operational Cost				
01	Lime (Kgs.)	200	10/-	1,000/-
02	Cow dung (Kgs.)	2000	5/-	10,000/-
03	Urea (Kgs.)	20	10/-	200/-
04	Super Phosphate (Kgs.)	100	5/-	500/-
05	Fish seed/Fish Fingerlings	2000	3/-	6,000/-
06	Feed (Pelleted Feed/Supplementary feeding with DOB and GOC) in Kgs.	3000	30/-	90,000/-
07	Medicines	-	-	25,000/-
08	Labour expenses	01	10000/month	1,20,000/-
09	Miscellaneous expenses	-	-	50,000/-
Total Operational Cost (B)				3,02,700-00

	A. Total Project Cost (A+B)	9,32,700/-
	B. Income	
01	Production)From 2 nd year onwards) @ 10.0 tons/Ha	2000 Kgs
02	Sale price/ton @ 130000/- per ton	2,60,000/-
03	Total Profit (Rs.)	1,00,000-00/-

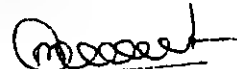

Note: This estimate is based on the state latest schedule of rates (SOR). Detailed estimate of civil works attached separately. The items included are only illustrative and other items may be included at the appropriate time and place.

Estimates of Output and Value of Output:

Species	Duration of cycle (Months)	Density of Fingerlings	Survival Rate (%)	Average We(Kgs.)	Production (Kgs.)	Price/Kg	Output Value (Rs)
Rohu	10	800	90	1.1	800	130/-	1,04,000/-
Catla	10	600	90	1.4	600	130/-	78,000/-
Mrigal	10	400	90	1.0	400	130/-	52,000/-
Other	10	200	90	2.0	200	130/-	26,000/-
Total		2000	90	1.0	2000	100%	2,60,000/-

Source of Finance:

Item	Amount (Rs.)
Central Government	33,600/-
State Government	22,400/-
Bank Loan	-
Beneficiary's own funds	8,55,200/-
Total Cost of the Project	9,11,200/-

PMMSY- Karnataka proposals 2020-21

**Letter of Undertaking from application regarding construction of new
Grow-out ponds proposal**

To whomsoever it may concern

I/we Menasamma @ Ningamma W/O late Chikkegowda here by state that we are submitting an application for availing subsidy under PMMSY guidelines for sub component (1.4) construction of new grow-out pond at survey No.1 and acre $1\frac{1}{2}$ guntas, 12, Marashettihalli village, Halekote Hobli, Holenarasipura taluk, Hassan district.

The project cost for 0.20 ha Grow-out pond is Rs.4.00 lakhs and eligible subsidy is Rs.0.84.00 lakhs (60% subsidy). As per the norms we are required to meet remaining cost as beneficiary share amounting to Rs.0.84.00 lakhs.

In this regard I am furnishing this letter of undertaking stating that

1. Newly construction of new Grow-out ponds will be used for fisheries activities at least for a minimum period of next five years.
2. We have not availed similar assistance during last 5 years and not availed subsidy for the same activity under any other scheme or from any agency
3. construction of new Grow-out ponds would be managed under the supervision /guidance of qualified technical experts/ technical officers of the state department of fisheries.
4. All the post construction operation and maintenance costs of the construction of New Grow-out ponds shall be borne by us
5. construction of new Grow-out ponds constructed under the program will be subjected to inspection and audit by the state department of fisheries, NFDB or its representatives.

2. BACKGROUND /INTRODUCTION (REGION SPECIFIC)

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish instead of the traditional method of growing fish outdoors in open ponds. This system rears fish at high densities, in indoor tanks with a "controlled" environment. Recirculation aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters, and the method can in principle be used for any species grown in aquaculture such as fish, shrimps, clams, etc. Recirculation technology is however primarily used in fish farming.

Recirculation is growing rapidly in many areas of the fish farming sector, and systems are deployed in production units that vary from huge plants generating many tonnes of fish per year for consumption.

Recirculation can be carried out at different intensities depending on how much water is recirculate or re-used. Some farms are super intensive farming systems installed inside a closed insulated building using as little as 500 litres of new water, and sometimes even less, per kilo of fish produced per year. Other systems are traditional outdoor farms that have been rebuilt into recirculation systems using around 3 m³ new water per kilo of fish produced per year. Seen from an environmental point of view, the limited amount of water used in recirculation is of course beneficial as water has become a limited resource in many regions. Also, the limited use of water makes it much easier and cheaper to remove the nutrients excreted from the fish as the volume of discharged water is much lower than that discharged from a traditional fish farm. Recirculation aquaculture can therefore be considered a most environmentally friendly way of producing fish at a commercially viable level. The nutrients from the farmed fish can be used as fertilizer on agricultural farming land or as a basis for biogas production.

Most interesting though, is the fact that the limited use of water gives a huge benefit to the production inside the fish farm. Traditional fish farming is totally dependent on external conditions such as the water temperature in the tanks, cleanliness of the water, oxygen levels, or weed and leaves drifting downstream and blocking the inlet screens, etc. In a recirculate system these external factors are eliminated either completely or partly, depending on the degree of recirculation and the construction of the plant. Recirculation enables the fish farmers to completely control all the parameters in production, and

the skills of the farmer to operate the recirculation system itself becomes just as important as his ability to take care of the fish.

Controlling parameters such as water temperature, oxygen levels, or daylight for that matter, give stable and optimal conditions for the fish, which again gives less stress and better growth. These stable conditions result in a steady and foreseeable growth pattern that enables the farmer to precisely predict when the fish will have reached a certain stage or size. The major advantage of this feature is that a precise production plan can be drawn up and that the exact time the fish will be ready for sale can be predicted. This favours the overall management of the farm and strengthens the ability to market the fish in a competitive way

BACKGROUND

Tumakuru is one of the industrial cities located in the state of Karnataka, also known as *ShaikshanikaNagari*(city of education) and *Kalpatharu Nadu* (land of coconut trees). Since 28 August 2010, Tumakuru has been accorded the status of a City Corporation. It is situated at a distance of 70 km (43 mi) northwest of Bangalore, along National Highway NH-4 and NH-206. It is the headquarters of the Tumakuru district. The District has 401 Departmental tanks(>40 Ha. act) with WSA of 31373.39 Ha.1319 G P tanks (<40 Ha. act), with WSA of 3129 Ha. besides 4 reservoirs contributing to WSA of 3798 Ha. Fishermen population of the District is estimated to be around 21800 There are 25 Fisheries Co-operative societies of which 23 are active in fisheries. 8 nurseries in different Taluks of the District have the capacity to supply 25 lakhs per annum. The stocking potential of the District is 250 lakhs seeds per annum. Targeted fish production is 17000-18000 MT fish per annum. A revenue of Rs.1.30 Crore is revenue remitted to Government from disposal of fishery rights of 224 Departmental tanks during 2016-17.

3. BENEFITS & JUSTIFICATION

- Reduced dependency on antibiotics and therapeutants generate marketing advantage of high quality safe seafood.
- Reduction of direct operational costs associated with feed, predator control and parasites.
- Potentially eliminate release of parasites to recipient waters.
- Risk reduction due to climatic factors, disease and parasite impacts provided the RAS design has fully taken into account local climate, ambient air / water temperature conditions, incoming water treatment and bio-security.
- RAS production can promote versatility in terms of location for farming, proximity to market and construction on brown-field sites. However, they still need to be in close proximity to source water supplies and consideration needs to be given to local water quality and aesthetics since RAS farms resemble industrial buildings.
- Enable production of a broad range of species irrespective of climatic requirements provided costs of temperature control beyond ambient are energy efficient.
- Enable secure production of non-endemic species.
- Feed management is potentially greatly enhanced in RAS when feeding can be closely monitored over 24h periods. The stable environment promotes consistent growth rates throughout the production cycle to market size – provided the operator and RAS design has taken into account the diverse range of water quality management issues. Optimum environmental conditions promote excellent FCRs with some high value species achieving market size.
- The benefits of RAS in terms of feed management assumes the operator has the capability to accurately control and record fish biomass, mortality rates and movements across the farm. Efficiency in these tasks becomes increasingly important with increasing farm size.
- Due to increased growth rates and superior FCRs that can be secured in RAS farms energy savings related to feed use may partially compensate for increased energy costs associated with pumping and water purification.

• Exposure of stock to stress on RAS farms can be reduced for some factors such as adverse weather, unfavourable temperature conditions, pollution incidents and predation. However, fish welfare can be reduced and exposure to stressful situations increased in relation to stocking density, chronic exposure to poor water quality and associated metabolic by-products due to inadequate water treatment technology or inexperienced management.

4. OBJECTIVES

- Reduced water requirements as compared to pond aquaculture systems.

Decreased by 90%

- Reduced land needs due to the high stocking density
- Site selection flexibility and independence from a large, clean water source.
- Reduction in waste water effluent volume. Environmental friendly.
- Increased biosecurity and ease in treating disease outbreaks if any.
- Ability to closely monitor and control environmental conditions to maximize production efficiency. Similarly, independence from weather and variable environmental conditions. Can be used in extreme weather zone also with ease.
- High output fish from minimal area with fish density ranging upto 50-150kg/m³ under perfect conditions

5. TECHNICAL DETAILS

A. Site/ Location Details

CHELVANAHALLI VILLAGE, BANAVAR HOBLI
ARASIKERE (T), HASSAN (D), KARNATAKA

B. Technical Specifications

The fish tanks are dug up (18X8X6 ft.) of which volume is 30 cum and water capacity of tank is 30000 litre. The dimensions of the fish tank (an elevation and plan for same is attached with this document). Additional input will be sought from a Civil Engineer to assess the Structural stability of the tanks. Furthermore, Geo-membrane lined ponds have an average life span of 10-15 years if proper maintenance is adhered to.

The fish tank will be covered with 90% shade net or any other material to avoid direct sunlight falling on the tanks which could cause algal bloom which if uncontrolled will have an adverse effect on fish health.

This would be a standalone RAS system and can be modified and clubbed to other systems such as Aquaponics or IFS (Integrated Farming System) if so desired at a later date with little effort as per your requirements.

There should be continuous power supply to the system as any prolonged power failure would have an adverse effect. Total power consumption would be limited to under 3KV max.

Other instruments like Bio Filters, Swirl Filters, Aeration Devices, EPDM Diffusers etc. have a longer life if they are maintained regularly unless there is wear and tear from mishandling. The Filter module is constructed keeping in mind the ease of maintenance and handling. A pressure washer will come in handy for ease of cleaning the filters and tanks etc.

The pumps (pond pump and aeration devices) are imported and have high life efficiency and can be run 24 x 7 x 365 days at a fraction of power consumption than commercially available pumps. It is a very rare chance that anything gets burnt out. There would be no warranty on such items.

For smooth functioning of filters and for best water quality parameters at high stocking density we need are to clean and maintain the filters periodically. Ideally, 10% per cent periodic water exchange may be required to keep the system a running at its optimal condition.

The filter set we are going to install is MBBR (Moving Bed Bio Reactor) which is a proven technology used by industry experts for STP, Aquaculture, WTP etc. The main advantage of MBBR filter is listed below:

- Less sensitivity to Shock Loading.
- Clog-free Operation.
- No Channels or Dead spots.
- Provides High Bio – Surface Area.
- Make Bio-Reactors extremely compact.
- No Backwash needed.
- No Sludge return Systems Needed.
- Longer Media Life

Scope of the Project: Tilapia (GIFT/MST) – Detailed

Tilapias (GIFT – Genetically Improved Farmed Tilapia or MST – Mono Sex Tilapia) are the fish of choice as we have chosen to recirculate water. The fingerlings will be at a max size of 2-3 inches and will grow up to 500-750 gm. in period of 6-8 months.

As the fishes are all MALES there would not be a problem of reproduction.

Technically for every 100 fishes put into the pond there may be a mortality rate of 10-15% and the growth rate varies according to water quality and DO – dissolved oxygen levels, but out of the 100 fingerlings, 30% will grow faster (shooters) and can be harvest as early as 4 months, 15% will be slow growers and the rest will put out an average growth as mentioned above.

The maximal stocking density for pond would be 2000 fingerlings with a total count of 12000 fingerlings in a pond with a culture period of 6 months (2 cycles annually).

The production capacity for each pond for a culture period of 6-7 months is minimum 500 gm to 1 Kg per fish with combined value of 6000 Kg.

The optimal fingerling size would be of 2-2.5 inches of GIFT (Genetically Improved Farmed Tilapia) or MST (Monosex Tilapia)

Fish feed can be locally sourced in bulk from local distributors and of floating type pellets. Growel, Unibait, Anmol and Godrej are the brands available. Growel is a preferable choice. Details of the distributor will be provided to you.

Additionally, we can reduce the feed cost by feeding Azolla or Duckweed as one time per day supplement to the fishes. Azolla and Duckweed are high in protein content and will complement a complete and balanced diet to the fishes. A plan for such will be provided to you along with Azolla/Duckweed seeds.

We need to have a complete water analysis kit and will be trained on usage of such as regular water quality testing is an important factor in Aquaculture to get the desired output. The kit includes colorimetric test reagents for Ammonia, Nitrite, Nitrate and pH levels along with digital pH and Temp meters.

The required fingerling of GIFT & the required quantity of fish feed will be given by Aqua One Centre at optimal cost.

7. COST ESTIMATES

A. Capital Cost

A: CAPITAL COST	Unit Price	Qty	Total
Fish Tank Construction (30 Cub Meter)	60000	6	₹ 3,60,000.00
MBBR Filtration Set (De-coupled & Anaerobic)	60000	6	₹ 3,60,000.00
Feed Storage & Office Unit	100000	1	₹ 1,00,000.00
Pond Pump 15000LPH	10500	8	₹ 84,000.00
Air oxytube	410	180	₹ 73,800.00
Aerators (Air pump for oxygen Supply) 120 LPM	10000	15	₹ 1,50,000.00
Aerators (Air pump for oxygen Supply) 60 LPM	8500	6	₹ 51,000.00
Pressure washer, water testing kit & Misc. Items	25000	1	₹ 25,000.00
Biosecurity fencing for pond (Including 90% Shade)	200000	1	₹ 2,00,000.00
Transportation Cost	40000	1	₹ 40,000.00
Accounting items	50000	1	₹ 50,000.00
Installation and Misc. Expenses	150000	1	₹ 1,50,000.00
Total A			₹ 10,43,800.00

B: OPERATIONAL COST			
Gift Tilapia Seeds (Annually 2 cycles)	3	24000	₹ 72,000.00
Feed Cost (Annually 2 cycles)	42	13200	₹ 5,54,400.00
Transportation Cost	25000	2	₹ 50,000.00
Electricity Cost Annually	12	15000	₹ 1,80,000.00
Total B			₹ 8,56,400.00

C: COST-BENEFIT ANALYSIS		
C1: Annual fixed cost		
a. Depreciation on capital investment @ 15%		₹ 2,46,570.00
b. Insurance premium @ 2% of the capital investment		₹ 32,876.00
c. Interest on 75% of the capital investment @ 7.8% per annum		₹ 96,162.30
d. Administrative/Other expenses @ 2% of 75% capital investment		₹ 24,657.00
TOTAL Annual fixed cost C1 (a+b+c+d)		₹ 4,00,265.30
C2: Annual Variable Cost		
a. Annual operational cost (B)		₹ 8,56,400.00
b. Interest on operational cost @ 7.8%		₹ 66,799.20
TOTAL Annual Variable cost C2 (a+b)		₹ 9,23,199.20
TOTAL OPERATIONAL COST (C1+C2)		₹ 13,23,464.50

D. INCOME	
a. Income from GIFT Tilapia production (500gm) - 12000 kg @ Rs. 220/-	₹ 26,40,000.00
b. Income from other fish products @ 40% of 12k Fishes @ Rs. 40/- per Kg	₹ 1,92,000.00
TOTAL INCOME	₹ 28,32,000.00

FINANCIAL ANALYSIS	
a. Operating cost	₹ 8,56,400.00
b. Total cost	₹ 25,00,200.00
c. Gross Revenue	₹ 28,32,000.00
d. Net Operating income (C-a)	₹ 19,75,600.00
e. Net profit (c-b)	₹ 3,31,800.00
f. BC ratio (c/b)	1.13

9. EXPECTED OUTCOMES

1. Expected Production of Fishes = 12,000kg per year
2. Expected Income = 28,32,000 per year
(avg 220rs / kg per year)
3. Expected Profit
 - i) 1st YEAR 3,31,800 /-
 - ii) 2nd YEAR 19,75,600/-
 - iii) THIS WILL CONTINUE FROM NEXT YEAR

Hence, From 6 Fish Ponds we can get this much of production and Profit after reduction of Operation Cost also.

PROJECT REPORT FOR THE PROPOSED CONSTRUCTION OF GROWOUT FISH POND

1. **Administrative**

Project Address: Doddahalli village

Survey Nos. : 54/13

Hobli : Doddamagge

Taluk : Arakalagud

District : Hassan

PROJECT REPORT FOR THE CONSTRUCTION OF FISH CULTURE GROWOUT POND

INTRODUCTION: Fish is the cheapest and most easily digestible animal protein and was obtain from natural sources from time immemorial for consumption by human being. However, due to over exploitation and pollution, the availability of fish in natural water have declined considerable forcing scientists to adopt various methods to increase production in controlled or under artificial conditions. The technology development for fish culture in which more than one type of compatible fishes are cultured simultaneously has now picked up in the country called as composite fish culture. This will enables to get maximum fish production for a pond through utilization of available fish food organisms in all the niches, supplemented by artificial feeding.

BACKGROUND: The new proposed fish pond construction by **Sri. Ramakrishna s/o hanumantegowda doddahalli village doddamagge hobali arakalagud talukk-573201** in survey nos. 154/13 has a water source from canal/river and also he is having a water source from borewell. The proposed land is having black soil with high water retention capacity very much suitable for fish culture. The farmer with his family members are very much interested in taking up fish farming in ½(half) acre area as they are not getting good price/profit in the agriculture crop cultivation. With good education, experienced family members and fish farming experienced relatives in AP, he wants to do a fish farming in a scientific way by targeting 1-2.5 tons/1/2acre of fish production. Since he is having a surplus water source, can do farming continuously throughout the year. As the proposed site is just one km away from state high way road, the accessibility to the site is very easy and can monitor whenever any emergency situation arises. The road accessibility made

him to transport the harvested fishes in lesser time with fresh condition to the consumer.

DETAILS OF THE PROJECT AND ECONOMICS AT GLANCE:

1	Location and ownership of the land	Sri. Menasamma u ningamma w/o late chikkegowda marashettihalli village halekote hobali holarasipura taluk-573211
2	Water spread area	0.2Ha (1/2-half acer)
3	Water level of the pond	1.5 mtr
4	Nature of soil	Black soil
5	Pond conditions	Good
6	Water supply	Deep well and canal/Hemavathi River
7	Inputs	Feed - starting with GIC and Rice bran shifting to 22 feed pellets. Feed ratio approx 1:1.4-1.5
a)	Stocking of pond	At 10000/Ha of size 3-4 inch fingerlings. The price of the seed will be Rs.3 per seed.
b)	Fertilization:	Depending upon water & soil quality to be assessed on periodical study.
	a) Organic manure	10,000 kg cattle dung & 2,000 kg Poultry manure/Ha/Year.
	b) Inorganic manure	Super phosphate - 500 kg/Ha/year & Urea - 100 kg/Ha/year
8	Mode of Harvest	Repeated netting once they reach marketable size of 1.0 kg & above (partial harvesting method over a period of three months)
9	Growth & Fish production	Expected fish production 4.0 tons/acr by following scientific methods of fish culture envisaged in the project report.
10	Marketing	Bhalki Town, neighboring villages & cities like Bidar, Kalburgi, Raichur, Manvi, Sirivara, Ballari, Gadag, Harihara, Davanagere, Hospet, Hubli, Bangalore, Bhadravathi, Tumkur etc. Excess production will be exported to Howrah market in Kolkata, Salem, Coimbatore & Trichur markets in south India as well as to the Karnataka state govt owned Karnataka Co-operative Fisheries Development Federation who are bulk purchasing fresh fish from fish farmers & selling

		through their retail outlets (KIOSKS) in Mysore, Bangalore, Tumkur, Mandya & Hassan districts.

Detailed Estimate of Capital and Operational Costs

Constructing pond area: 0.2 Ha

SI No.	Items	Unit	Rate (Rs.)	Amount (in Rs.)
A. Capital Cost				
01	Land cleaning/ pond excavation	0.2Ha	-	5,00,000/-
02	Civil works for water supply (inlet & outlet), cement pipes, sluice gates etc.	2	25,000/-	1,00,000/-
03	Shed for feed storage & watchman shed	1	10,000/-	10,000/-
04	Farm equipments (nets, aeration appliances)	4	10,000/-	10,000/-
05	Any other	1	10,000/-	10,000/-
Total Capital Cost (A)				6,30,000/-
B. Operational Cost				
01	Lime (Kgs.)	200	10/-	1,000/-
02	Cow dung (Kgs.)	2000	5/-	10,000/-
03	Urea (Kgs.)	20	10/-	200/-
04	Super Phosphate (Kgs.)	100	5/-	500/-
05	Fish seed/Fish Fingerlings	2000	3/-	6,000/-
06	Feed (Pelleted Feed/Supplementary feeding with DOB and GOC) in Kgs.	3000	30/-	90,000/-
07	Medicines	-	-	25,000/-
08	Labour expenses	01	10000/month	1,20,000/-
09	Miscellaneous expenses	-	-	50,000/-
Total Operational Cost (B)				3,02,700-00

	A. Total Project Cost (A+B)	9,32,700/-
	B. Income	
01	Production)From 2 nd year onwards) @ 10.0 tons/Ha	2000 Kgs
02	Sale price/ton @ 130000/- per ton	2,60,000/-
03	Total Profit (Rs.)	1,00,000-00/-

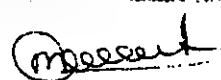

Note: This estimate is based on the state latest schedule of rates (SOR). Detailed estimate of civil works attached separately. The items included are only illustrative and other items may be included at the appropriate time and place.

Estimates of Output and Value of Output

	Duration (Months)	Density of fingerlings	Survival (%)	Average wt (Kgs.)	Production (Kgs.)	Price (Rs./Kgs.)	Output Value (Rs.)
Rohu	10	800	90	1.1	800	130/-	1,04,000/-
Catla	10	600	90	1.4	600	130/-	78,000/-
Mrigal	10	400	90	1.0	400	130/-	52,000/-
Other	10	200	90	2.0	200	130/-	26,000/-
Total		2000	90	1.0	2000	100%	2,60,000/-

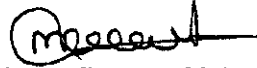

Source of Finance:

Item	Amount (Rs.)
Central Government	33,600/-
State Government	22,400/-
Bank Loan	-
Beneficiary's own funds	8,55,200/-
Total Cost of the Project	9,11,200/-

ಮುನ್ಸಿಪಲ್ ಕಮಿಷನರಿ

square meter Wait till the plankton sets and then fill the tank to the full by leaving 10-15 cm free board.

Stocking

Once the tanks are ready for stocking, it is intended to stock the ponds with 4-5 cm Carps and tilapia fingerlings as prescribed by the experts or consultants. Initially we stock @ 1-2/m².

Feeds and Feeding:

We use commercially available floating feeds with with 30-34% protein and 4-6% fat containing feed at the rate of 20% of the body weight for 30 days. Growout feed with 30:4 diets. After every 25-30 days 5% bodyweight of the feed will be reduced.

ಆರಂಭಿಕ.

capital were the major constraints. But with new age technologies, one can grow fish in a small ponds and expect better productivity and income.

Looking at this gap and the resources available with us, we have decided to establish the Modern Aqua Farm at Gangoor (V) Arkalgud (T) in the land (Survey No. 170/1).

I have visited FRIC, Hebbal, Bangalore and discussed about technical issues and they have agreed to extend the technical service.

Sufficiently Developed and Stable Market

There is good demand for this fish in the inland domestic market. Since, it is suitable for preparing various value added products, the fish food industry will absorb significant quantity of tilapia. There is always a good export market for tilapia. Production price structures provide economic feasibility and consumers can get better quality fish at lower price. But it brings value to the existing production systems by giving price and prestige to the farmer.

Site Selection

The success of the farming depends on the site selection and scientific management. Our project fulfills the following parameters.

- **Market demand:** Huge
- **Accessibility and proximity:** Our site is very close to Hassan Periyapattana Mysore main road
- **Water availability:** Canal and borewell
- **Power facilities:** Available

Cost of the land: Own

Safety of the produce

and the people. We are localities and project site is safe.

Pond designs

For fish farming in earthen ponds, I have decided to construct pond in an area of 4000 m² and in a rectangular shape with 6 feet depth.

Pond Preparation

After construction of the tank with necessary pipes and fittings (Water, air diffusers, light, drain etc.), we fill the water through a mesh or a filter bag to a capacity up to 30-40%.

Leave it for a day and then add 30 g of lime and 0.2 g of Urea and 2 kg of cowdung per

Economics of Aquaculture in 1 ha

Project on Fish Farming

India is one of the leading fish producers in the world and country is producing 12.8 mt annually and about 63% of Indian fish production comes from the freshwater. Karnataka has vast aquatic resources and has great potentials for increasing its production from 5.8 LT to 10.0 LT. In order to augment freshwater fish production, Government of India has announced a new scheme in the name of Pradhan Mantri Matsya Sampada Yojana (PMMSY) with a budget outlay of 20000 cr for five years. As an unemployed youth, I want to take advantage of this scheme and take up commercial aquafarming in Tumkur.

Why Aquaculture?

Looking at the economics of fish farming compared to other agriculture activities, fish farming is profitable. In spite of its profitability it is not advisable to convert good agriculture land into aquaculture ponds. Aquaculture can be taken up in wastelands and low productive lands. A fish culture farm can have 5-10% area of pond. This will enhance the soil health by draining the excess salt and water in the soil.

Particulars	Paddy (Normal)	Sugarcane (Normal)	Fish culture (Normal)	Fish culture (Saline/alka.)
Crops/year	2	1	1	1
Prodn/ha/yr	50 q	50 t	2.4 t	1.28 t
Gross Revenue	25000	55000	72000	38454
Expenditure	16000	30000	29900	22150
Net profit	9000	25000	42000	16304
BC ratio	1.56	1.83	2.48	1.73

Why Hassan?

I have a land at Gangoor Village and Post R Servy No 170/1 @ Arkalgud Taluk Hassan district with sufficient water resources. There is huge demand for freshwater fishes in Hassan. Most of it coming from Hassan Periyapattana Mysore. Looking my resources and its feasibility for aquaculture and the demand for fish, I have decided to establish fish farm at my site.

Hassan is an agrarian district with a population of 30+ lakhs and majority are non-vegetarians and would love fish in their diets. Unfortunately, limited water resources, poor

2. BACKGROUND /INTRODUCTION (REGION SPECIFIC)

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system rears fish at high densities, in indoor tanks with a "controlled" environment. Recirculation aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters, and the method can in principle be used for any species grown in aquaculture such as fish, shrimps, clams, etc. Recirculation technology is however primarily used in fish farming.

Recirculation is growing rapidly in many areas of the fish farming sector, and systems are deployed in production units that vary from huge plants generating many tonnes of fish per year for consumption.

Recirculation can be carried out at different intensities depending on how much water is recirculate or re-used. Some farms are super intensive farming systems installed inside a closed insulated building using as little as 300 litres of new water, and sometimes even less, per kilo of fish produced per year. Other systems are traditional outdoor farms that have been rebuilt into recirculate systems using around 3 m3 new water per kilo of fish produced per year. Seen from an environmental point of view, the limited amount of water used in recirculation is of course beneficial as water has become a limited resource in many regions. Also, the limited use of water makes it much easier and cheaper to remove the nutrients excreted from the fish as the volume of discharged water is much lower than that discharged from a traditional fish farm. Recirculation aquaculture can therefore be considered a most environmentally friendly way of producing fish at a commercially viable level. The nutrients from the farmed fish can be used as fertilizer on agricultural farming land or as a basis for biogas production.

Most interesting though, is the fact that the limited use of water gives a huge benefit to the production inside the fish farm. Traditional fish farming is totally dependant on external conditions such as the water temperature in the tanks, cleanliness of the water, oxygen levels, or weed and leaves drifting downstream and blocking the inlet screens, etc. In a recirculate system these external factors are eliminated either completely or partly, depending on the degree of recirculation and the construction of the plant. Recirculation enables the fish farmers to completely control all the parameters in the production, and

the skills of the farmer to operate the recirculation system itself becomes just as important as his ability to take care of the fish.

Controlling parameters such as water temperature, oxygen levels, or daylight for that matter, give stable and optimal conditions for the fish, which again gives less stress and better growth. These stable conditions result in a steady and foreseeable growth pattern that enables the farmer to precisely predict when the fish will have reached a certain stage or size. The major advantage of this feature is that a precise production plan can be drawn up and that the exact time the fish will be ready for sale can be predicted. This favours the overall management of the farm and strengthens the ability to market the fish in a competitive way.

BACKGROUND

Hassan district is surrounded by Chikmagalur District to the north west, Chitradurga District to the north, Tumkur District to the east, Mandya District to the south east, and Dakshina Kannada District to the west.

Hassan and Belur stand around 3,215 feet (980 m) and 3,210 feet (980 m) above sea level respectively.

Most of the district lies in the watershed of the Hemavathi River, a tributary of the Kaveri River. The general level of Hassan district slopes with the course of the Hemavathi, from the peaks of the Western Ghats downwards to the southeast. The chief tributary of the Hemavathi is the Yagachi River, which flows southward from Belur taluk to join the Hemavathi near Gorur. In 1981 the Hemavathi Dam was completed near Gorur, downstream from the confluence with the Yagachi, creating a reservoir of 8,000 hectares. The Hemavathi passes through Holenarsipur taluk in a southerly direction and joins with the Kaveri near Hampapura in Mysore district, close to the border of Hassan district. The Kaveri flows through the southernmost part of the District.

3. BENEFITS & JUSTIFICATION

- Reduced dependency on antibiotics and therapeutants generate marketing advantage of high quality 'safe' seafood.
- Reduction of direct operational costs associated with feed, predator control and parasites.
- Potentially eliminate release of parasites to recipient waters.
- Risk reduction due to climatic factors, disease and parasite impacts provided the RAS design has fully taken into account local climate, ambient air / water temperature conditions, incoming water treatment and bio-security.
- RAS production can promote versatility in terms of location for farming, proximity to market and construction on brown-field sites. However, they still need to be in close proximity to source water supplies and consideration needs to be given to local water quality and aesthetics since RAS farms resemble industrial buildings.
- Enable production of a broad range of species irrespective of temperature requirements provided costs of temperature control beyond ambient are energy efficient.
- Enable secure production of non-endemic species.
- Feed management is potentially greatly enhanced in RAS when feeding can be closely monitored over 24h periods. The stable environment promotes consistent growth rates throughout the production cycle to market size – provided the operator and RAS design has taken into account the diverse range of water quality management issues. Optimum environmental conditions promote excellent FCRs with some high value species achieving market size.
- The benefits of RAS in terms of feed management assumes the operator has the capability to accurately control and record fish biomass, mortality rates and movements across the farm. Efficiency in these tasks becomes increasingly important with increasing farm size.
- Due to increased growth rates and superior FCRs that can be secured in RAS farms energy savings related to feed use may partially compensate for increased energy costs associated with pumping and water purification.

- Exposure of stock to stress on RAS farms can be reduced for some factors such as adverse weather, unfavourable temperature conditions, pollution incidents and predation. However, fish welfare can be reduced and exposure to stressful situations increased in relation to stocking density, chronic exposure to poor water quality and associated metabolic by-products due to inadequate water treatment technology or inexperienced management.

4. OBJECTIVES

- Reduced water requirements as compared to pond aquaculture systems

Decreased by 90%

- Reduced land needs due to the high stocking density
- Site selection flexibility and independence from a large, clean water

- Reduction in waste water effluent volume. Environmental friendly

- Increased biosecurity and ease in treating disease outbreaks if any

- Ability to closely monitor and control environmental conditions to maximize production efficiency. Similarly, independence from weather and variable environmental conditions. Can be used in extreme weather zone also with ease.

- High output fish from minimal area with fish density ranging upto 50

150kg/m³ under perfect conditions

5. TECHNICAL DETAILS

A. Site/ Location Details

BISALEHALLI VILLAGE, MUDUDI HOBLI
ARASIKERE (T), HASSAN (D),
KARNATAKA - 573119

B. Technical Specifications

The fish tanks are dug up (18x8x6 ft) of which volume is 30 cum and water capacity of tank is 30000 litre. The dimensions of the fish tank (an elevation and plan for same is attached with this document). Additional input will be sought from a Civil Engineer to assess the Structural stability of the tanks. Furthermore, Geo-membrane lined ponds have an average life span of 10-15 years if proper maintenance is adhered to.

The fish tank will be covered with 90% shade net or any other material to avoid direct sunlight falling on the tanks which could cause algal bloom which if uncontrolled will have an adverse effect on fish health.

This would be a standalone RAS system and can be modified and clubbed to other systems such as Aquaponics or IFS (Integrated Farming System) if so desired at a later date with little effort as per your requirements.

There should be provision for power backup system. Power consumption should be limited to under 3KV max.

Other instruments like Bio Filters, Swirl Filters, Aeration Devices, EPDM Diffusers etc. have a longer life if they are maintained regularly unless there is wear and tear from mishandling. The Filter module is constructed keeping in mind the ease of maintenance and handling. A pressure washer will come in handy for ease of cleaning the filters and tanks etc.

The pumps (pond pump and aeration devices) are imported and have high life efficiency and can be run 24 x 7 x 365 days at a fraction of power consumption than commercially available pumps. It is a very rare chance that anything gets burnt out. There would be no warranty on such items.

For smooth functioning of filters and for best water quality parameters at high stocking density we need to clean and maintain the filters periodically. Ideally, 10% per cent periodic water exchange may be required to keep the system a running at its optimal condition.

The filter set we are going to install is MBBR (Moving Bed Bio-Reactor) which is a proven technology used by industry experts for STP, Aquaculture, WTP etc. The main advantage of MBBR filter is listed out below.

- Less sensitivity to Shock Loading.
- Clog-free Operation.
- No Channels or Dead spots.
- Provides High Bio – Surface Area.
- Make Bio-Reactors extremely compact.
- No Backwash needed.
- No Sludge return Systems Needed.
- Longer Media Life

Scope of the Project: Tilapia (GIFT/MST) – Detailed

Tilapias (GIFT – Genetically Improved Farmed Tilapia or MST – Mono Sex Tilapia) are the fish of choice as we have chosen to recirculate water. The fingerlings will be at a max size of 2-3 inches and will grow up to 500-750 gm. in period of 6-8 months.

As the fishes are all MALEs there wouldn't be a problem of reproduction there by increasing growth rate.

Technically for every 100 fishes put into the pond there may be a mortality rate of 10-15% and the growth rate varies according to water quality and DO – dissolved oxygen levels, but out of the 100 fingerlings, 30% will grow faster (shooters) and can be harvest as early as 4 months, 15% will be slow growers and the rest will put out an average growth as mentioned above.

The maximal stocking density for pond would be 2000 fingerlings with a total count of 12000 fingerlings in a pond with a culture period of 6 months (2 cycles annually).

The production capacity for each pond for a culture period of 6-7 months is minimum 500 gm to 1 Kg per fish with combined value of 6000 Kg.

The optimal fingerling size would be of 2-2.5 inches of GIFT (Genetically Improved Farmed Tilapia) or MST (Monosex Tilapia)

Fish feed can be locally sourced in bulk from local distributors and of floating type pellets, Growel, Unibait, Anmol and Godrej are the brands available. Growel is a preferable choice. Details of the distributors will be provided to you.

Additionally, we can reduce the feed cost by feeding Azolla or Duckweed as one time per day supplement to the fishes. Azolla and Duckweed are high in protein content and will complement a complete and balanced diet to the fishes. A plan for such will be provided to you along with Azolla/Duckweed seeds.

We need to have a complete water analysis kit and will be trained on usage of such as regular water quality testing is an important factor in Aquaculture to get the desired output. The kit includes colorimetric test reagents for Ammonia, Nitrite, Nitrate and pH levels along with digital pH and Temp meters.

The required fingerling of GIFT & the required quantity of fish feed will be given by Aqua One Centre at optimal cost.

7. COST ESTIMATES

A. Capital Cost

A. CAPITAL COST	Unit Price	Qty	Total
Fish Tank Construction (30 Cub. Meter)	60000	6	₹ 3,60,000.00
MBBR Filtration Set (De-coupled & Anaerobic)	60000	6	₹ 3,60,000.00
Feed Storage & Office Unit	100000	1	₹ 1,00,000.00
Pond Pump 15000LPH	10500	8	₹ 84,000.00
Air oxytube	410	180	₹ 73,800.00
Aerators (Air pump for oxygen Supply) 120 LPM	10000	15	₹ 1,50,000.00
Aerators (Air pump for oxygen Supply) 60 LPM	8500	6	₹ 51,000.00
Pressure washer, water testing kit & Misc. Items	25000	1	₹ 25,000.00
Biosecurity fencing for pond (Including 90% Shade)	200000	1	₹ 2,00,000.00
Plumbing Items	50000	1	₹ 50,000.00
Installation and Misc. Expenses	150000	1	₹ 1,50,000.00
TOTAL A			₹ 16,43,800.00

B. OPERATIONAL COST			
Gift Tilapia Seeds (Annually 2 cycles)	3	24000	₹ 72,000.00
Feed Cost (Annually 2 cycles)	42	13200	₹ 5,54,400.00
Transportation Cost	25000	2	₹ 50,000.00
Electricity Cost Annually	12	15000	₹ 1,80,000.00
Total B			₹ 8,56,400.00

C. COST-BENEFIT ANALYSIS		
C1. Annual fixed cost		
a. Depreciation on capital investment @ 15%		₹ 2,46,570.00
b. Insurance premium @ 2% of the capital investment		₹ 32,876.00
c. Interest on 75% of the capital investment @ 7.8% per annum		₹ 96,162.30
d. Administrative/Other expenses @ 2% of 75% capital investment		₹ 24,657.00
TOTAL Annual fixed cost C1 (a+b+c+d)		₹ 4,00,265.30
C2. Annual Variable Cost		
a. Annual operational cost (B)		₹ 8,56,400.00
b. Interest on operational cost @ 7.8%		₹ 66,799.20
TOTAL Annual variable cost C2 (a+b)		₹ 9,23,199.20
TOTAL OPERATIONAL COST (C1+C2)		₹ 13,23,464.50

D. INCOME	
a. Income from GIFT Tilapia production (500gm) - 12000 kg @ Rs. 220/-	₹ 26,40,000.00
b. Income from other fish products @ 40% of 12k Fishes @ Rs. 40/- per Kg	₹ 1,92,000.00
TOTAL INCOME	₹ 28,32,000.00

FINANCIAL ANALYSIS	
a. Operating cost	₹ 8,56,400.00
b. Total cost	₹ 25,00,200.00
c. Gross Revenue	₹ 28,32,000.00
d. Net Operating income (C-a)	₹ 19,75,600.00
e. Net profit (c-b)	₹ 3,31,800.00
f. BC ratio (c/b)	1.13

9. EXPECTED OUTCOMES

1. Expected Production of Fishes = 12,000kg per year
2. Expected Income = 28,32,000 per year
(avg 220rs / kg per year)
3. Expected Profit
 - i) 1st YEAR 3,31,800 /-
 - ii) 2nd YEAR 19,75,600/-
 - iii) THIS WILL CONTINUE FROM NEXT YEAR

Hence, From 6 Fish Ponds we can get this much of production and Profit after reduction of Operation Cost also.

KARNATAKA - 573119

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system grows fish at high densities. Recirculatory aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters

Sr No	Description	Unit	Qty	Amount

Application form

Name of the component: Development of inland fisheries And Aquaculture.

Name of the Sub-component: Construction of New grow out ponds.

PART A: Information to be furnished by the applicant		
Sl. No	Particulars	Details
(1)	(2)	(3)
◆	APPLICANT'S INFO	
	Name of the applicant (In Block Letters)	Sheshamma W/O G.K. Kullegowda
	Address	
	a. Permanent address:	
	b. Communication/ correspondence address:	Chikkole, Kasaba (H), Belur (T), Hassan
	(Telephone/ mobile number)	Ph No-8277053352
	c. Category	
◆	LOCATION ASPECTS	
	Details of location/ land where	
	construction is proposed for	Chikkole
	aquaculture activity	
	a) State	Karnataka
	b) District	Hassan
	c) Taluk/ Mandal	Belur
	d) Revenue Village	Chikkole Village
2	k) Survey Number(s)	204*
	f) Ownership (whether freehold or on lease)	Own
	g) If on lease, duration of lease (minimum 10 years)	
	h) Total area of the proposed unit (in m ²)	0.607 ha
	i) Approx. number and area /volume presently brought under fish farming (Growout) within the proposed location	0.607 ha

◆	COST ESTIMATES	
3	Detailed plan and estimate of the proposed construction/establishment works of the fish farm (Grow out)	14.4 Lakhs
◆	ASSISTANCE AVAILED	
4	Whether assistance for this purpose has been obtained under any other scheme of the Central/ State Government/others?	NO If yes (provide the details) Year: Quantum of assistance: Conditions for assistance:
◆	ACTION PLAN	
5	Details of proposed action plan for activities (tentative schedule of activities)	Project preparation - Aug'20 Process & sanction - Sep and Oct'20 Expected sanction of subsidy - Mar'20 Production structures - Nov'20 to Jan'20 Stocking - Mar'20 Harvesting - Oct'20
◆	ECONOMICS	
6	Details of economics of operation (proposed production) ⁶	
◆	EXPERIENCE	
7	Experience of the applicant in Management of fish farm (Grow out) details of training undergone by the applicant/ employee/ technical staff and others if any?	No
◆	FINANCIAL RESOURCES	
8	Financial resources to meet the project costs beyond the eligible subsidy	Promoters have made arrangements to meet the margin requirement from own sources and are agreeable to provide an undertaking for the same
◆	MARKETING	
9	Marketing tieup for sale of seed/fish with any agency within or outside the area/State	Hassan provides a ready market for the fish to be produced in farm. There is good demand for IMC
◆	UNDERTAKING	
10	Letter of undertaking	Necessary undertaking is provided

PART B: Declaration by the Applicant	
<p>❖ Declaration by the applicant</p> <p>I/We Sheshamma /son/spouse/Authorized Signatory/ies of Kullegowda hereby declare that the information furnished above is true to the best of my/our knowledge and belief. I am/we are fully aware that if it is found that the information furnished in the application is false or there is any kind of deviation/violation of the conditions under which assistance is provided to me by the DADF, any action as deemed fit for violation of this condition may be taken against me/us.</p>	
Date:	16/08/2020
Place:	23/08/20
Signature of the applicant/s	
<p>❖ Confirmation statement by District Fisheries officer/authorized officer</p> <p>It is hereby confirmed that</p> <p>a. Application together with documents have been verified as per the NFDB guidelines and found to be in order</p> <p>b. The proposed site for establishment of fish farming (Grow out) has been inspected by the Departmental Officer/s and found feasible in support of aquaculture as proposed in the DPR</p> <p>c. Proposed establishment of fish farming/seed rearing is needed to accelerate fish and seed production</p>	
Date:	
Place:	
Name, Signature and seal of the District Fisheries Officer/authorized officer	
<p>❖ Recommendation by the Commissioner/ Director of Fisheries</p> <p>a. The self contained proposal/DPR along with verified individual's applications and associated documents for establishment of RAS units is submitted herewith to NFDB as per the NFDB guidelines</p> <p>b. State Government has made adequate budget allocations to meet its share of financial assistance</p> <p>c. The same is recommended for consideration for Central Financial Assistance under BF scheme</p>	
Date:	
Place:	
Signature and seal of the Head of the department/authorized officer	
<p>❖ Recommendation by the authorized officer of NFDB</p> <p>The individual's application, attached documents and the self contained project proposals/DPRs of States/UTs submitted to NFDB has been verified as per the guidelines of the Board and found correct. State Government has indicated adequate budget allocations to meet its share of financial assistance. The self contained project proposal/DPRs of the State/UT for establishment of RAS units is hence recommended and forwarded to DADF for consideration and final approval.</p>	
Date:	
Place:

2. BACKGROUND /INTRODUCTION (REGION SPECIFIC)

A Recirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system rears fish at high densities in indoor tanks with a controlled environment. Recirculation aquaculture is essentially a technology for farming fish by reusing the water in the production. The technology is based on the use of mechanical and biological filters, and the method can in principle be used for any species grown in aquaculture such as fish, shrimps, clams, etc. Recirculation technology is however primarily used in fish farming.

Recirculation is growing rapidly in many areas of the fish farming sector, and systems are deployed in production units that vary from huge plants generating many tonnes of fish per year for consumption.

Recirculation can be carried out at different intensities depending on how much water is recirculate or re-used. Some farms are super intensive farming systems installed in closed insulated building using as little as 300 litres of new water and sometimes even less per kilo of fish produced per year. Other systems are traditional outdoor farms that have been rebuilt into recirculation systems using around 3 m³ new water per kilo of fish produced per year. Seen from an environmental point of view, the limited amount of water used in recirculation is of course beneficial as water has become a limited resource in many regions. Also, the limited use of water makes it much easier and cheaper to remove the nutrients excreted from the fish as the volume of discharged water is much lower than that discharged from a traditional fish farm. Recirculation aquaculture can therefore be considered a most environmentally friendly way of producing fish at a commercially viable level. The nutrients from the farmed fish can be used as fertilizer on agricultural farming land or as a basis for biogas production.

Most interesting though, is the fact that the limited use of water gives a huge benefit to the production inside the fish farm. Traditional fish farming is totally dependent on external conditions such as the water temperature in the tanks, cleanliness of the water, oxygen levels, or weed and leaves drifting downstream and blocking the inlet screens, etc. In a recirculate system these external factors are eliminated either completely or partly, depending on the degree of recirculation and the construction of the plant. Recirculation enables the fish farmers to completely control all the parameters in the production.

the skills of the farmer to operate the recirculation system itself becomes just as important as his ability to take care of the fish.

Controlling parameters such as water temperature, oxygen levels, or daylight for that matter, give stable and optimal conditions for the fish, which again gives less stress and better growth. These stable conditions result in a steady and foreseeable growth pattern that enables the farmer to precisely predict when the fish will have reached a certain stage or size. The major advantage of this feature is that a precise production plan can be drawn up and that the exact time the fish will be ready for sale can be predicted. This favours the overall management of the farm and strengthens the ability to market the fish in a competitive way

BACKGROUND

Arsikere is a town and taluka in the Hassan district in the state of Karnataka, India. This region is known for its coconut production and second largest coconut market in Karnataka after Tiptur along with Malekallu Tirupathi hill. Arsikere is the taluk headquarters, a major railway junction on the South Western Railway which links Mangalore and Mysore to North Karnataka and a central place for tourists who visit nearby places that do not have rail access, such as Belur, Halebidu and Shravanabelagola.

3. BENEFITS & JUSTIFICATION

advantage of high quality 'safe' seafood.

- Reduction of direct operational costs associated with feed, predator control and parasites.
- Reduced risk of contamination of the product.
- Risk reduction due to environmental factors. The RAS design has fully taken into account local climate, ambient air, water temperature conditions, incoming water treatment and bio-security.
- RAS production can promote versatility in terms of location for farming, proximity to market and construction on brown-field sites. However, they still need to be in close proximity to source water supplies and consideration needs to be given to local water quality and aesthetics since RAS farms resemble industrial buildings.
- Enable production of a broad range of species irrespective of temperature requirements provided costs of temperature control beyond ambient are energy efficient.
- Enable secure production of non-endemic species.
- Feed management is potentially greatly enhanced in RAS when feeding can be closely monitored over 24h periods. The stable environment promotes consistent growth rates throughout the production cycle to market size. The RAS design has taken into account the diverse range of species and their requirements. The RAS design can be adapted to produce a wide range of species with some high value species achieving market size.
- The benefits of RAS in terms of feed management assumes the operator has the capability to accurately control and record fish biomass, mortality rates and movements across the farm. Efficiency in these tasks becomes increasingly important with increasing farm size.
- The total energy cost of the RAS can be reduced by energy savings related to feed use may partially compensate for increased energy costs associated with pumping and water purification.

- Exposure of stock to stress on RAS farms can be reduced for some factors such as adverse weather, unfavourable temperature conditions, pollution incidents and predation. However, fish welfare can be reduced and exposure to stressful situations increased in relation to stocking density, chronic exposure to poor water quality and associated metabolic by-products due to inadequate water treatment technology or inexperienced management.

4. OBJECTIVES

- Reduced water requirements as compared to pond aquaculture systems.

Decreased by 90%

- Reduced land needs due to the high stocking density
- Site selection flexibility and independence from a large, clean water source.
- Reduction in waste water effluent volume. Environmental friendly.
- Increased biosecurity and ease in treating disease outbreaks if any.
- Ability to closely monitor and control environmental conditions to maximize production efficiency. Similarly, independence from weather and variable environmental conditions. Can be used in extreme weather zone also with ease.
- High output fish from minimal area with fish density ranging upto 50-150kg/m³ under perfect conditions

KARNATAKA - 573119**

B. Technical Specifications

The fish tanks are dug up (38X18X6 ft.) of which volume is 100 cum and water capacity of tank is 100000 litre. The dimensions of the fish tank (an elevation and plan for same is attached with this document). Additional input will be sought from a Civil Engineer to assess the Structural stability of the tanks. Furthermore, Geo-membrane lined ponds have an average life span of 10-15 years if proper maintenance is adhered to.

The fish tank will be covered with 90% shade net or any other material to avoid direct sunlight falling on the tanks which could cause algal bloom which if uncontrolled will have an adverse effect on fish health.

This would be a standalone RAS system and can be modified and clubbed to other systems such as Aquaponics or IFS (Integrated Farming System) if so desired at a later date with little effort as per your requirements.

There should be continuous power supply to the system as any prolonged power failure would have an adverse effect. Total power consumption would be limited to under 3KV max.

Other instruments like Bio Filters, Swirl Filters, Aeration Devices, EPDM Diffusers etc. have a longer life if they are maintained regularly unless there is wear and tear from mishandling. The Filter module is constructed keeping in mind the ease of maintenance and handling. A pressure washer will come in handy for ease of cleaning the filters and tanks etc.

The pumps (pond pump and aeration devices) are imported and have high life efficiency and can be run 24 x 7 x 365 days at a fraction of power consumption than commercially available pumps. It is a very rare chance that anything gets burnt out. There would be no warranty on such items.

For smooth functioning of filters and for best water quality parameters at high stocking density we need are to clean and maintain the filters periodically. Ideally, 10% per cent periodic water exchange may be required to keep the system a running at its optimal condition.

The filter set we are going to install is MBBR (Moving Bed Bio Reactor) which is a proven technology used by industry experts for STP, Aquaculture, WTP etc. The main advantage of MBBR filter is listed out below:

- Less sensitivity to Shock Loading.
- Clog-free Operation.
- No Channels or Dead spots.
- Provides High Bio – Surface Area.
- Make Bio-Reactors extremely compact.
- No Backwash needed.
- No Sludge return Systems Needed.
- Longer Media Life.

Scope of the Project: Tilapia (GIFT/MST) Detailed

Tilapias (GIFT – Genetically Improved Farmed Tilapia or MST – Mono Sex Tilapia) are the fish of choice as we have chosen to recirculate water. The fingerlings will be at a max size of 2-3 inches and will grow up to 500-750 gm. in period of 6-8 months.

As the fishes are all males there wouldn't be a problem of reproduction there by increasing growth rate.

Technically, for every 100 fishes put into the pond there may be a mortality rate of 10-15% and the growth rate varies according to water quality and DO – dissolved oxygen levels, but out of the 100 fingerlings, 30% will grow faster (shooters) and can be harvest as early as 4 months, 15% will be slow growers and the rest will put out an average growth as mentioned above.

The maximal stocking density for pond would be 6000 fingerlings with a total count of 6000 fingerlings in a pond with a culture period of 6 months (2 cycles annually).

The production capacity for each pond for a culture period of 6-7 months is minimum 500 gm to 1 Kg per fish with combined value of 2000 Kg.

The optimal fingerling size would be of 2-2.5 inches of GIFT (Genetically Improved Farmed Tilapia) or MST (Monosex Tilapia).

Fish feed can be locally sourced in bulk from local distributors and of floating type pellets. Growel, Unibait, Anmol and Godrej are the brands available. Growel is a preferable choice. Details of the distributor will be provided to you.

Additionally, we can reduce the feed cost by feeding Azolla or Duckweed as one time per day supplement to the fishes. Azolla and Duckweed are high in protein content and will complement a complete and balanced diet to the fishes. A plan for such will be provided to you along with Azolla/Duckweed seeds.

We need to have a complete water analysis kit and will be trained on usage of such as regular water quality testing is an important factor in Aquaculture to get the desired output. The kit includes colorimetric test reagents for Ammonia, Nitrite, Nitrate and pH levels along with digital pH and Temp meters.

The required fingerling of GIFT & the required quantity of fish feed will be given by Aqua One Centre at optimal cost.

7. COST ESTIMATES

A. Capital Cost

A. CAPITAL COST	Unit Price	Qty	Total
Fish Tank Construction 39X19X6 ft	120000	1	₹ 1,20,000.00
MBBR Filtration Set (De-coupled & Anerobic)	108500	1	₹ 1,08,500.00
Feed Storage & Office Unit	60000	1	₹ 60,000.00
Pond Pump 15000LPH	9500	1	₹ 9,500.00
Pond Pump 10000LPH	8500	1	₹ 8,500.00
Air oxytube	400	30	₹ 12,000.00
Aerators (Air pump for oxygen Supply) 120 LPM	10000	3	₹ 30,000.00
Aerators (Air pump for oxygen Supply) 60 LPM	8500	1	₹ 8,500.00
Pressure washer, water testing kit & Misc. Items	25000	1	₹ 25,000.00
Biosecurity fencing for pond (Including 90% Shade)	100000	1	₹ 1,00,000.00
Transportation Cost	20000	1	₹ 20,000.00
Plumbing items	25000	1	₹ 25,000.00
Consultation, Installation, Supply & Misc. Expenses	70000	1	₹ 70,000.00
TOTAL A			₹ 5,97,000.00

B. OPERATIONAL COST (6 Months)			
Gift Tilapia Seeds (Anually 2 cycles)	5	6000	₹ 30,000.00
Feed Cost (Anually 2 cycles)	42	2200	₹ 92,400.00
Transportation Cost	15000	1	₹ 15,000.00
Electricity Cost Annual (per unit cost X consumption)	6	2600	₹ 15,600.00
Total B			₹ 1,53,000.00

3. Expected Profit

i) 1st YEAR 1,50,000/-

ii) 2nd YEAR 7,47,000/-

iii) THIS WILL CONTINUE FROM NEXT YEAR

Hence, From 1 Fish Pond we can get this much of production and Profit after reduction of Operation Cost also.

Quote/Project Description

A Redirculatory Aquaculture System (RAS) is a new and unique way to farm fish. Instead of the traditional method of growing fish outdoors in open ponds, this system rears fish at high densities. Redirculatory aquaculture is essentially a technology for farming

by reusing the water in the production. The technology is based on the use of mechanical and biological filters
